Chapter 1: Overview of CasperWeb

CasperWeb is your online interface for managing customer and product information.

CasperWeb is the management application for the Casper server. It is used to manage items such as executables, products, versions, families, and so on. You can manage hundreds or even thousands of customer and product items in the CasperWeb efficiently, and also maintain the system.

In this Chapter

In this chapter you will find information on:

- CasperWeb menus
- CasperWeb functionality
- prerequisites for using CasperWeb

CasperWeb Menus

CasperWeb is a web-based user interface. The CasperWeb Main menu contains five submenus (see Figure 1-1 CasperWeb Main menu). Each submenu contains links to these function screens:

- **Customer Info**
 - add and edit customer information
- **Product**
 - add and manage product codes
 - configure executables, options and levels
 - manage product families and products
 - use the setup wizard to quickly set up products

- **Admin**
 - generate reports (sales, expired licenses, authorizations, serial numbers)
 - specify the exchange rate (for credit card transactions)
 - change the user password
- **SuperUser**
 - configure users, set access levels, change passwords
 - configure email, database and CasperWeb log parameters
 - set up CrypKey eTransfer
- **Contact**
 - how to contact CrypKey
 - CasperWeb copyright information and website link

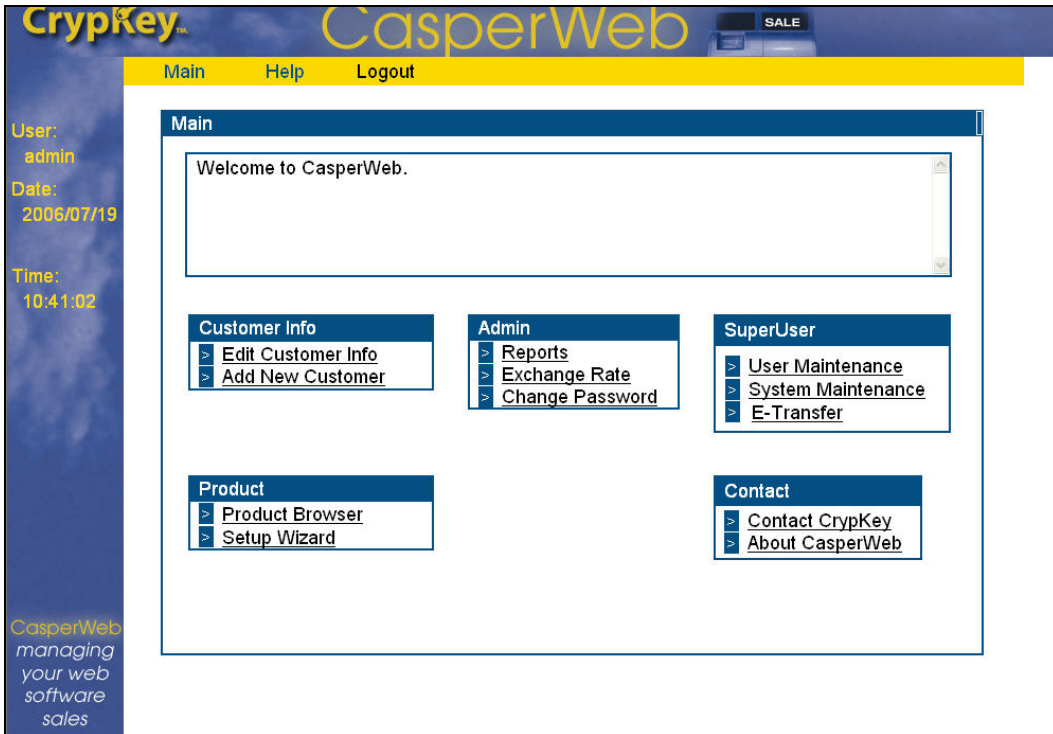

Figure 1-1 CasperWeb Main menu

CasperWeb Capabilities

Using the CasperWeb interface, you can carry out the following tasks related to your business:

- configure product families, products, executables, license restrictions, and product codes
- record customer information, including Serial Number, customer name, customer number, product name, license restrictions, and invoice number
- apply and enforce restrictions on the use of your software
- generate a report of product license authorizations
- import customer, license, and product data

CUSTOMER INFORMATION

This function is central to the operation of CasperWeb. The key data field in customer information is the Serial Number, which represents the customer's purchase of a specific product or add-on. Each customer record could contain essential data besides the Serial Number, including customer name, customer number, product identifier, license restrictions, and invoice number.

The Customer History feature displays the history of Site Key transactions by Serial Number (that is, by product and customer).

PRODUCT INFORMATION

The Product Code consists of information that you will use to organize your company's products.

You must always include the three required fields when defining product codes: executable name/filename, password, and product number (see *Product Setup Wizard* on page 115).

OPTIONS AND LEVELS

Options and Levels give you flexibility in licensing different options for an application.

An Option is a feature of the software that can be turned on or off in any combination. You can have one or more options enabled at the same time.

A Level is a set of features that is defined as 'on' when any single level is chosen. Only one level can be set at a time. See *Add Options* on page 104 for more information.

PRODUCT CODE

The Product Code is a configuration of product family, product name, executable, and other data items. A Product Code represents a specific software configuration (i.e. license usage restrictions) for which a customer could be authorized. A Product Code identifies this specific license configuration, which makes it easy to track in CasperWeb.

SITE KEY GENERATOR

You can issue Site Keys manually to customers using the Site Key Generator. You can set the end user's license restrictions by generating a Site Key manually. The Site Key Generator uses several types of information from CasperWeb, such as product family, product name, and executable to generate a Site Key.

An example of when you would issue a Site Key manually using CasperWeb is when your customer requests a license via telephone, fax, or regular email (i.e., not sending an email via the Client Interface Wizard program).

Prerequisites

- In order to use CasperWeb you will need an Internet connection and/or SMTP/POP3 email service.
- See *Part 1: Setting Up Casper* for a complete list of prerequisites needed to use Casper

Chapter 2: Using CasperWeb

The Serial Number is the key information used by CasperWeb to find and manage customer records.

Casper is a real-time, Internet-based application with a design based on the client-server model.

In this Chapter

In this chapter you will find information on:

- Serial numbers
- logging on and off CasperWeb
- error messages
- navigating in CasperWeb

Serial Numbers

There are two methods of software authorization available in Casper: serial number and credit card. eRegister uses the serial number authorization method only. See *Part 1: Setting up Casper, Chapter 2: Technical Help, Configuring Casper* for more information. (eCommerce uses the credit card authorization method – see *Part 3: Casper eCommerce*.)

As the software vendor you provide Serial Numbers to your customers (based on whatever system you choose—see samples in the following sections). Casper only issues software licenses to customers with a valid Serial Number. The customer enters the valid Serial Number into the Client Interface (see *Part 1, Chapter 3: Getting Started, Client Demo Interface*). CasperWeb uses the Serial Number to authenticate the use of your CrypKey-protected software before authorizing its use by your customer. Casper then issues a license, which contains the restrictions you assigned to the Product Code associated with the Serial Number.

Log on to CasperWeb

To log on to or exit CasperWeb, see the following procedures.

Procedure

1. Open your Internet browser.
2. In the address bar, type the online address of your CasperWeb server/CasperWeb.
For example:

http://mycasper/casperweb

The Login window displays:

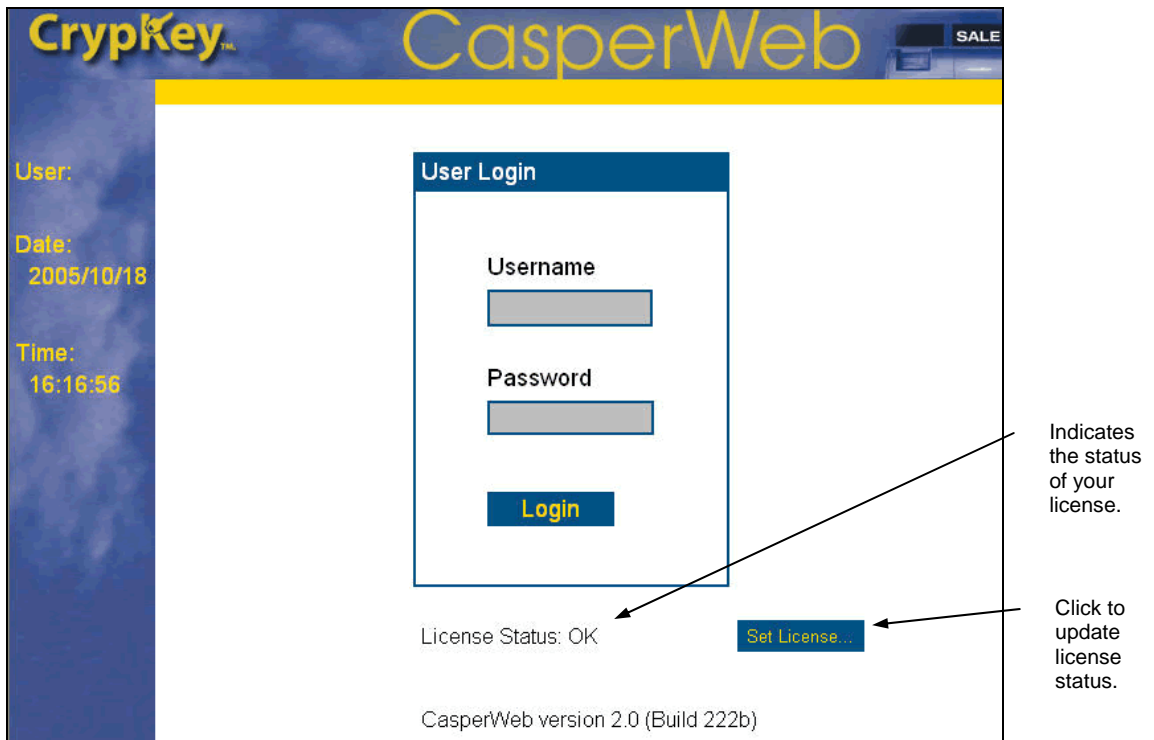

Figure 2-1 CasperWeb Log In screen

3. The license status will either read OK or it will prompt for a license automatically.
If it does not, click the **Set License** button to view the following window:

The screenshot shows a web interface titled "Casper Server License". Below the title, it says "License Status: Not Licensed". There are two input fields: "Site Code" with the value "D2AA 950C 4E94 2492 D3" and "Site Key" which is empty. To the right of the Site Key field is a blue "Save" button. Below these fields is a blue "Return to Login" button. Two arrows from the right side of the image point to the Site Key field and the Save button, with labels "Enter Site Key." and "Click Save." respectively.

Figure 2-2 License Status window

4. The Site Code is displayed automatically. Enter the Site Key.

Note: To obtain a Site Key, send the Site Code to authorize@crypkey.com with your customer service number and company name. CrypKey Authorization will send you a Site Key.

5. Click **Save**.
6. Click **Return to Login**. The License Status should now read OK.
7. To obtain the default username and password, contact CrypKey. Enter these two values. Note they are not case-sensitive.

Note: The username is admin; the password is the password that the user entered when they installed the Casper product.

8. Click the **Login** button. The CasperWeb Main menu displays:

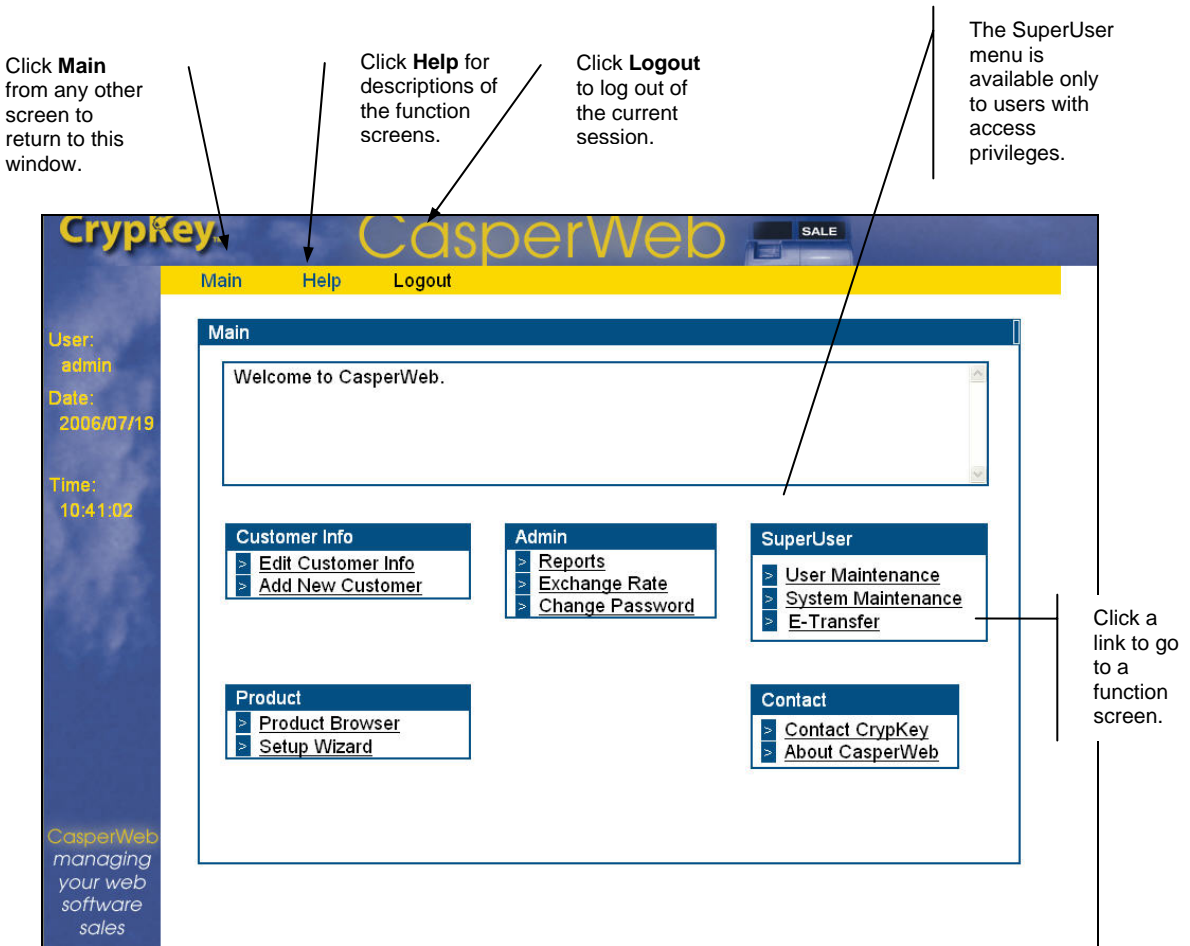

Figure 2-3 Log in to CasperWeb Main menu

9. Click a menu option, for example Add New Customer, to go to that screen.

Note: In some of the following figures you may notice this text at the top of a screen:

Figure 2-4 Multi-company License indicator

This will be present only if you are using an optional multi-company license. A multi-company license is normally not used and therefore will not appear on your CasperWeb interface. It is included in this manual only for purposes of demonstration.

Log Off CasperWeb

Procedure

You can log off CasperWeb from any screen displaying the Logout option in the menu at the top of the screen.

Note: We recommend you always log out as a security precaution. CasperWeb will time out after a certain period of inactivity.

1. Click the **Logout** option on the menu bar. CasperWeb displays the following message:

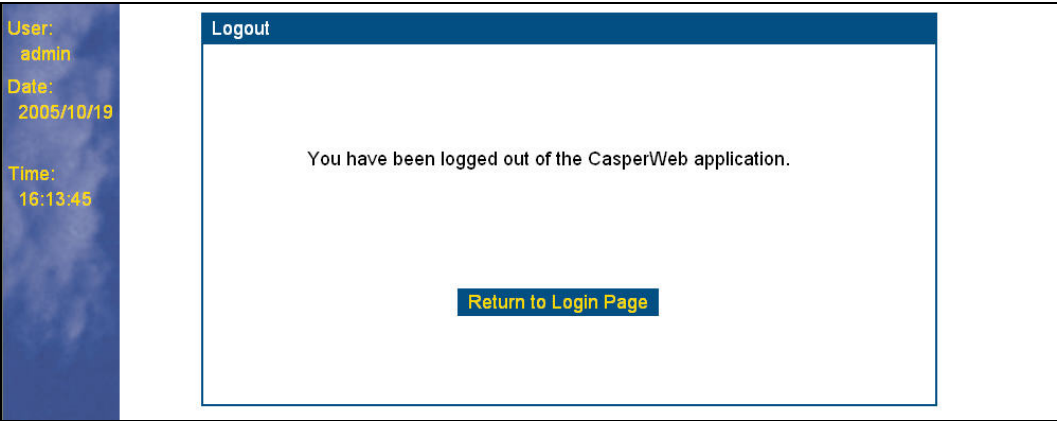

Figure 2-5 Log out message

Navigation in CasperWeb

The CasperWeb Main menu links to screens offering CasperWeb functions. Click on a menu link to open its screen. Screens contain a standard set of function buttons (see Table 2-1: Function Buttons in CasperWeb). Click the button to obtain the response shown in the table.

Table 2-1: Function Buttons in CasperWeb

Button	Function
Add	Adds a record of the specified type.
Back	Returns to the previously displayed screen (not necessarily the CasperWeb Main menu; to go to the CasperWeb Main menu, click on Main in the yellow menu bar at the top of each screen).
Create New	Creates new product code.

Button	Function
Create Product	Creates new product record with details you enter from the Product Wizard screen.
Delete	Deletes the specified record.
Done	Completes the creation of an added record.
Edit	Displays a detailed editing window for the applicable topic.
Find Serial/Name/Invoice	From the Customer Information screen, allows you to search for a customer record based on the serial number, customer name or invoice number.
Generate	Generates various reports from the Reports menu.
History	Searches on Serial Numbers, based on specified selection criteria.
Next	Advances to the next record (by alphanumeric sequence) of the type currently displayed.
Prev	Returns to the previous record (by alphanumeric sequence) of the type currently displayed.
Site Key Gen	Manual Site Key Generator.
Submit	Updates information within an existing Family, Product, Product Version, Executable, or Executable Version record.
Update	Updates information within an existing Product Code or Customer Information record.

SECURITY CONSIDERATIONS

CasperWeb is a secure application. Communication can be set up to be sent using HTTPS, so that no one else can decrypt and view the contents of the page.

Error Messages

If you attempt an operation that is not permitted in CasperWeb, the system displays an error pop-up window such as the following:

Figure 2-6 Installation from Download password

Try to interpret the error message and determine what action is necessary. If you have input an invalid value, click **Back to Previous Page** to refresh the screen where the error most likely occurred. Then correct the error and try your action again.

If you can't determine the reason for the error message, please take a screenshot of the screen and email it to support@crypkey.com with your company name and customer service number for analysis.

Occasionally CasperWeb will display an exception error message, which looks like this:

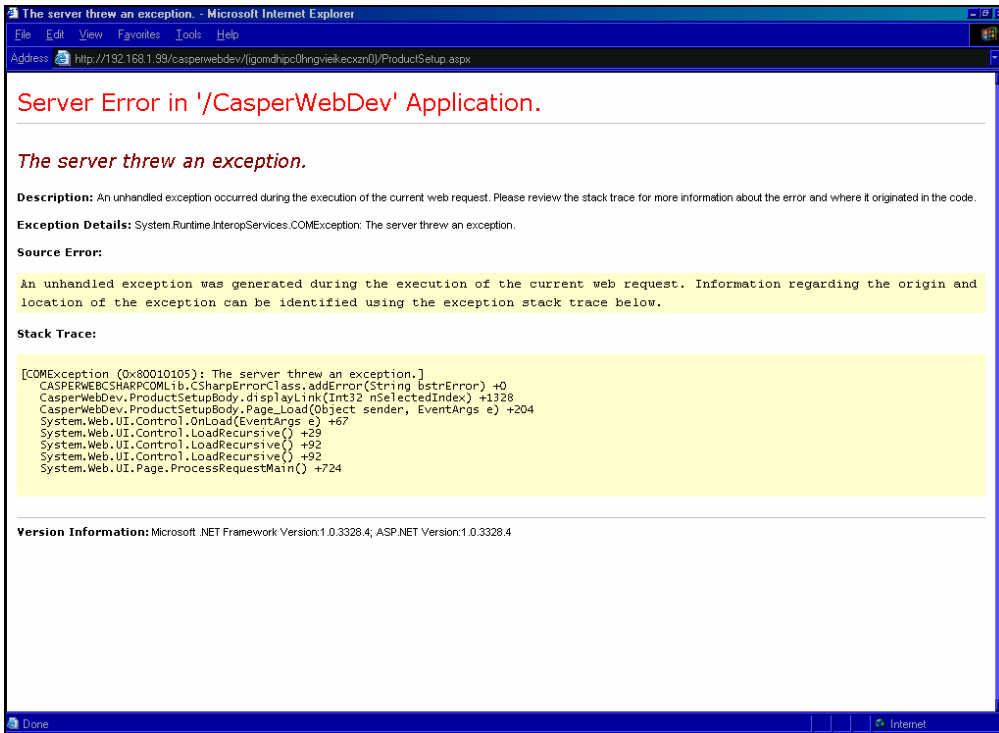

Figure 2-7 Exception Error message

Note: The appearance of the above window is no cause for alarm. The CasperWeb interface has simply timed out. There will be no loss of data. You need to return to the Login window and log in again.

If any exception screen appears consistently, we suggest that you take a screenshot of the screen and email it to Support@Crypkey.com with your company name and customer service number.

Chapter 3: Managing Products

Before you can process customer orders or issue software licenses, you need to know how to manage products.

In this chapter you will find information about:

- product information -- what a product consists of
- how to manage products
- how to browse and select products from the database
- how product codes are associated with Serial Numbers

Set Up Products

Your product information must be entered into CasperWeb before you can process customer orders or issue licenses. Product information includes:

- Family (see below) — the overall product category
- Product (see below) — the product name, number, and description
- Product Version (see below) — the name and number of the product release
- Executable (see *Add Executable* on page 97) — the executable name and description
- Executable Version (see *Add Executable Version* on page 101) — the name and number of the executable release
- Product Code (see *Add Product Codes*) — a unique alphanumeric code representing a product and its executable.

Note: The Product Code is not the same as the product. The product is the name of your product/application; the Product Code represents a unique relationship between a product, and product information such as the executable file. A product may have more than one Product Code, in order to represent more than one licensing option for that product.

Note: The Product Number, Executable name, and Executable password must **not** be changed from the original information in the developer keys. Developer keys are specific to your company and product. Your company received the developer keys from CrypKey when you completed your evaluation of CrypKey Instant or CrypKey SDK. These keys do not change. Consequently, to make possible the continued licensing of the product, the three values on which the keys are based – the Product number, the Executable name, and the Executable password – must also never change.

PRODUCT BROWSER

Note: The new Product Browser screen combines these screens from previous versions of CasperWeb:

- Product Browser,
- Executable, Options and Levels
- Family and Product

To go to the Product Browser screen, click the [Product Browser](#) link on the Product menu. From one central menu, you can manage all of your products, including executables, versions, families, license restrictions, options, levels, and product codes (see Figure 3-1 Product Browser screen).

Product Browser

Product Code	<input type="text"/>	Choose	Edit	Add
Executable	<input type="text"/>	Choose	Edit	Add
Executable Version	<input type="text"/>	Choose	Edit	Add
Level	<input type="text"/>	Choose	Edit	Add
Family	<input type="text"/>	Choose	Edit	Add
Product	<input type="text"/>	Choose	Edit	Add
Product Version	<input type="text"/>	Choose	Edit	Add

Options

Edit Add

Back

Add, modify or browse product-related information.

Add or modify product options.

Figure 3-1 Product Browser screen

REQUIRED FIELDS FOR PRODUCTS

Important: Before you can add a Product Code, all of the mandatory fields in the Product area on the Product Browser screen must be filled in. The Product Code will be associated with these items (executable, family, product and so on). Therefore, we recommend that you take the time to plan your product categories and how they will be associated with product codes. See Add Product Codes on page 114 for more information.

PRODUCT BROWSER FUNCTION BUTTONS

To add a new item, click the **Add** button.

Before you can **Edit** an item, you will browse and select it using the **Choose** button. Once an item is selected, click the **Edit** button to modify it.

The **Choose** button replaces the drop-down menu selector in previous versions of CasperWeb. This button allows you to browse the Casper database and select specific items. You can scroll through all available options, thus giving you many more manageable options.

When a button is not usable, it is greyed out. For example, if you haven't added any products, you won't be able to select the **Choose** button for products. If you haven't chosen a Family and Product, you will not be able to choose its Product Version for viewing or editing.

The following figure shows an example of how the Choose function is used to select a Product Code. Other screens which offer the Choose function work in a similar way.

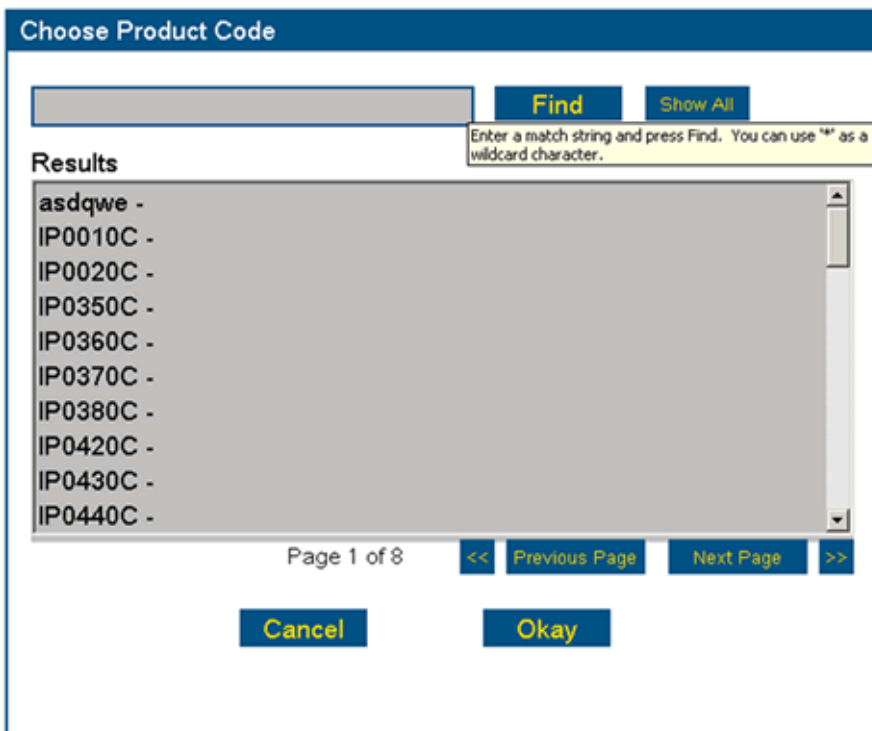

Figure 3-2 Choose Product Code

The results are displayed in alphanumeric order.

To refine your search, enter a match string and click **Find**. The asterisk character (*) can be used as a wild card. To clear the results and display all items again, click **Show All**.

To choose a result, highlight it. **Okay** accepts your choice; **Cancel** deselects it. Both actions return you to the previous screen you were working on.

MULTIPLE PAGES

A maximum of 50 items are displayed per page. Navigate through multiple pages of results as follows:

<<	jumps back 5 pages
>>	jumps ahead 5 pages
Previous Page:	goes to the previous page
Next Page:	goes to the next page

ADD PRODUCT INFORMATION

Procedure

This section describes how to add one or more families, products and product versions to CasperWeb.

Before you set up products in CasperWeb, there must be **at least one family (category) associated with the products**. The **Family** field in the Add Product screen is used to create and maintain records defining product families. You do not have to create a family if you use the Product Setup Wizard--it creates a default family for you (see Product Setup Wizard on page 115).

1. Go to the CasperWeb Main menu (see Log on to CasperWeb on page 68).
2. Under the Product menu, click **Product Browser**. The Product Browser screen is displayed:
3. Beside the **Family** box, click **Add** to add a new family of products.

Product Browser

Product Code	<input type="text"/>	Choose	Edit	Add
Executable	<input type="text"/>	Choose	Edit	Add
Executable Version	<input type="text"/>	Choose	Edit	Add
Level	<input type="text"/>	Choose	Edit	Add
Family	<input type="text"/>	Choose	Edit	Add
Product	<input type="text"/>	Choose	Edit	Add
Product Version	<input type="text"/>	Choose	Edit	Add

Options

Edit Add

Back

Click Add for the Family field.

Figure 3-3 Product Browser -- Add Family

4. CasperWeb displays the Add Family screen.
5. Enter the name and description for the new product family. The screen below shows an example:

Main Help Logout

Add Family

Family Basic

Description Base software package

Add Back

Enter family name and description.

Click Add.

Figure 3-4 Add Family

6. Click **Add**. If the action was successful, CasperWeb displays a message at the bottom of the Add Family screen:

The screenshot shows a web interface titled "Add Family". It contains two input fields: "Family" with the value "Basic" and "Description" with the value "Base software package". Below these fields are two buttons: "Add" and "Back". A message "Family was added successfully." is displayed at the bottom. A line points from the "Back" button to the text "Family added message." on the right side of the screen.

Figure 3-5 Add Family message

7. Click **Back** to return to the Product Browser screen.

8. Now you will add a product to the product family.

Note: A product can be associated with only one product family. Once a product has been associated with a product family, that relationship cannot be modified. To change the association, you must delete the product record, then recreate it and associate it with another product family. (See Modify Product Information on page 91.) You cannot delete a product if a Serial Number has been associated with it.

9. Click the **Choose** button beside the **Family** box. The Choose Family screen appears:

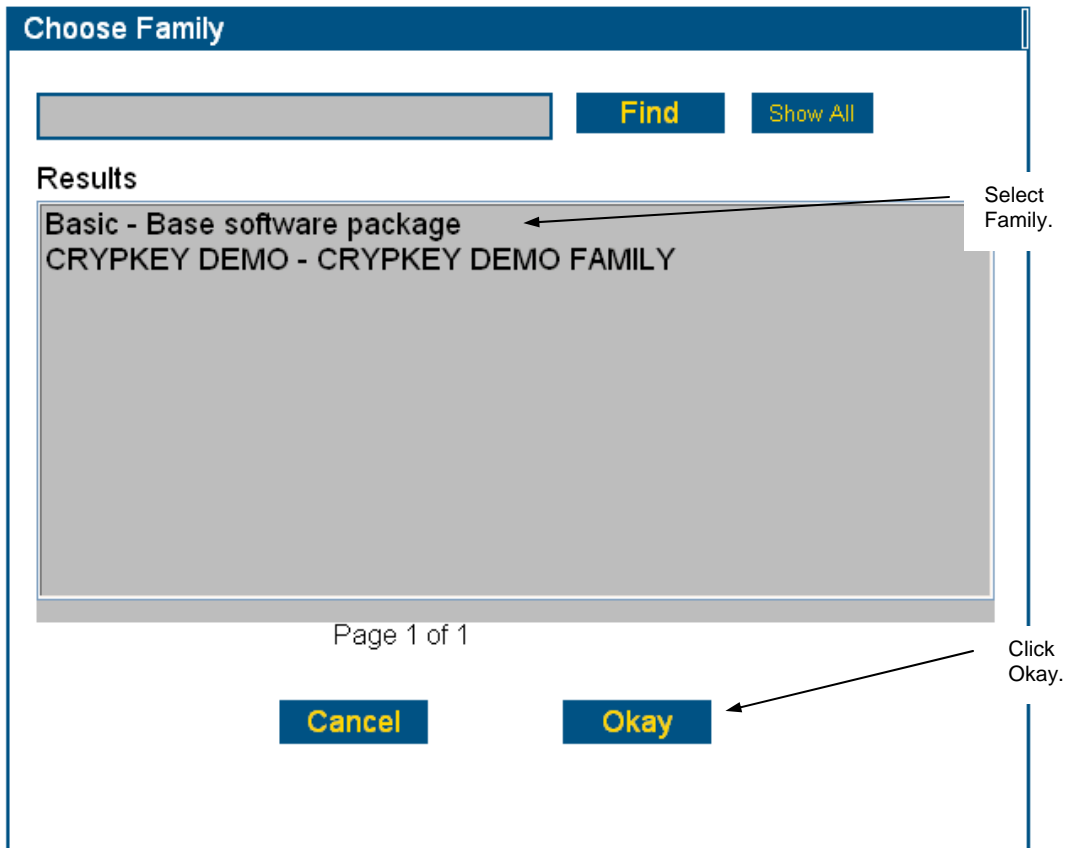

Figure 3-6 Choose Family

10. Select the family from the results list, or enter the name of a family in the empty box and click **Find** to do a search.
11. Click on the family you want to work with to highlight it.
12. Click **Okay**. The Product Browser screen displays the chosen family:

The screenshot shows the 'Product Browser' window. At the top is a yellow navigation bar with 'Main', 'Help', and 'Logout' links. Below this is a blue header bar labeled 'Product Browser'. The main content area contains a form with the following fields and buttons:

Field	Value	Choose	Edit	Add
Product Code		Choose	Edit	Add
Executable		Choose	Edit	Add
Executable Version		Choose	Edit	Add
Level		Choose	Edit	Add
Family	Basic	Choose	Edit	Add
Product		Choose	Edit	Add
Product Version		Choose	Edit	Add

Below the form is an 'Options' section with a large empty box and 'Edit' and 'Add' buttons. A 'Back' button is located to the right of the form. Two annotations with arrows point to the 'Add' buttons: one points to the 'Add' button in the 'Family' row, and the other points to the 'Add' button in the 'Product' row.

Family box is populated with chosen family.

Click Add for product.

Figure 3-7 Product Browser with selected Family

13. Click **Add** beside the Product box. The Add Product screen displays:

Add Product

Family

Product

Description

Enter Product name (and description if desired).

Click Add.

Add **Back**

Figure 3-8 Add Product screen

14. Enter the name of the product in the **Product** box.
15. Enter a description of the product (optional).
16. Click **Add**. If the action was successful, CasperWeb displays a message at the bottom of the Add Product screen:

The screenshot shows a web form titled "Add Product" with a dark blue header. Below the header, there are three input fields: "Family" with the value "Basic", "Product" with the value "eCommerce Suite", and "Description" which is an empty text area. Below these fields are two buttons: "Add" and "Back". At the bottom of the form, a message "Product was added successfully." is displayed. An arrow points from the text "Product added message." to this message.

Figure 3-9 Product added successfully

17. Click the **Back** button to return to the Product Browser.

Note: The Product box is not automatically populated with the new product.

18. Now you may add the version of this product.

Note: CasperWeb will accept multiple versions of a product.

19. From the Product Browser screen, click **Choose** beside the Product box:

Product Browser		
Product Code	<input type="text"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>
Executable	<input type="text"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>
Executable Version	<input type="text"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>
Level	<input type="text"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>
Family	<input type="text" value="Basic"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>
Product	<input type="text"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>
Product Version	<input type="text"/>	<input type="button" value="Choose"/> <input type="button" value="Edit"/> <input type="button" value="Add"/>

Options

Figure 3-10 Choose Product

20. The Choose Product screen is displayed. Select the product you have just created. You will be returned to the Product Browser screen.
21. Now click **Add** beside the Product Version box. The Add Product Version screen displays:

Add Product Version

Family

Product

Prod Version

Prod Number

Description

Product version required.

Product Number required.

Add **Back**

Figure 3-11 Add Product Version screen

22. You must enter both the Product Version and Product Number. If you leave the Product Version box empty, you will see an error message similar to the following:

The screenshot shows a web form titled "Add Product Version". The form contains the following fields and controls:

- Family:** A dropdown menu with "Basic" selected.
- Product:** A dropdown menu with "eCommerce Suite" selected.
- Prod Version:** An empty text input field. An arrow points to this field from the text "Enter Product Version (alpha-numeric).".
- Prod Number:** An empty text input field.
- Description:** A large text area with a vertical scrollbar.
- Buttons:** Two buttons at the bottom: "Add" (yellow text on a blue background) and "Back" (yellow text on a blue background).

Below the form, an error message is displayed: "Please enter the Product Version." An arrow points from this message to the "Prod Version" input field. To the right of the message, the text "Product version required message." is shown.

Figure 3-12 Add Product Version message

23. Enter the Product Version (alphanumeric).

24. If you click **Add** without first entering the Product Number, you will see an error message similar to the following:

The screenshot shows a web form titled "Add Product Version". It contains five input fields: "Family" (Basic), "Product" (eCommerce Suite), "Prod Version" (Release 2a), "Prod Number" (empty), and "Description" (empty text area). Below the fields are "Add" and "Back" buttons. A message at the bottom states: "Please enter the Product Number, an integer (1 to 254)." Annotations include an arrow pointing to the "Prod Number" field and another pointing to the message, both labeled "Product Number required.".

Add Product Version

Family: Basic

Product: eCommerce Suite

Prod Version: Release 2a

Prod Number:

Description:

Add **Back**

Please enter the Product Number, an integer (1 to 254).

Product Number required.

Product Number required message.

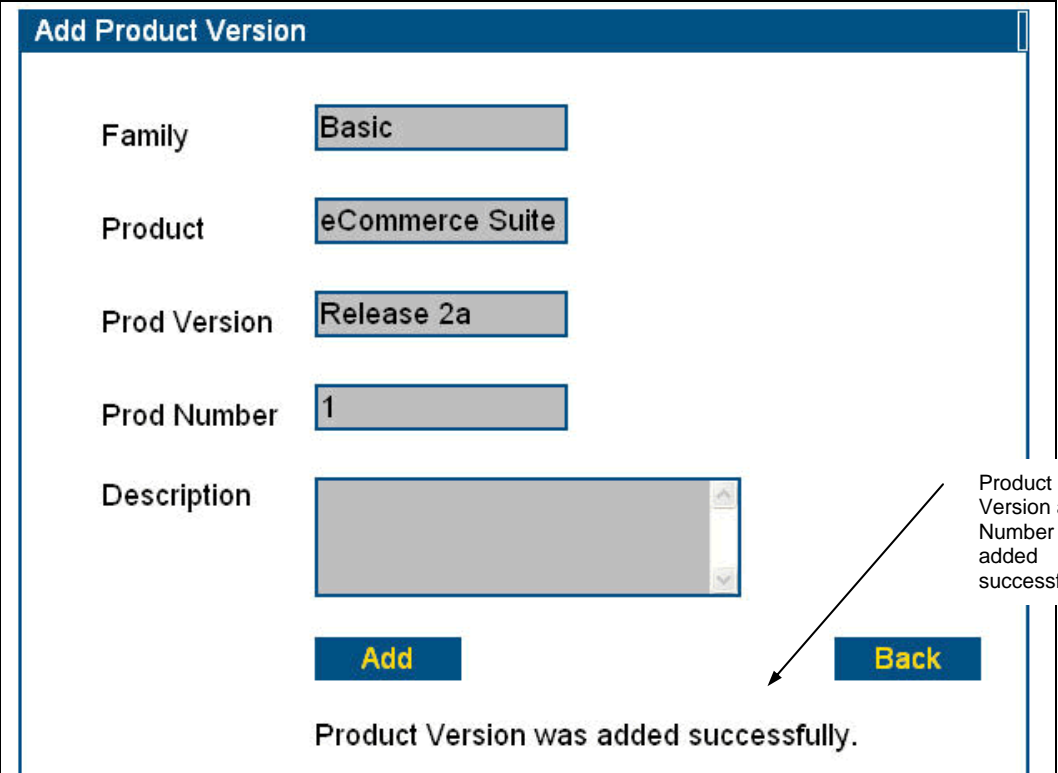

Figure 3-13 Add Product Number message

25. Enter the Product Number.

Note: The Product Number refers to the product ID you were given when you received your developer keys for CrypKey Instant or CrypKey SDK.

26. Click **Add**.

27. If the action was successful, CasperWeb displays the following message:

Add Product Version

Family

Product

Prod Version

Prod Number

Description

Product Version was added successfully.

Product Version and Number added successfully.

Figure 3-14 Add Product Version and Number message

28. Click **Back** to return to the Family and Product screen.
29. CasperWeb allows you to add any number of product versions to a single product. Therefore, you may want to add more versions to the product(s) you just entered.
30. Continue adding families and product information until you have added all the products and product categories you wish to store in the Casper database.

MODIFY PRODUCT INFORMATION

You can modify the description of a product or the product number. To modify product information, follow the steps below.

Procedure – Modify Product Description

In this example, we will modify the description of a product:

1. Go to the Product Browser screen (see Add Product Information on page 79 for navigation instructions).
2. **Choose** the Family (you can't select a Product until you choose the family).
3. Click **Choose** beside the Product box.
4. From the Choose Product screen, select the product you want to modify.
5. Now click **Edit** beside the Product box. The Edit Product screen displays:

The screenshot shows the 'Edit Product' screen with a dark blue header. Below the header, there are three labeled input fields: 'Family' with the value 'Basic', 'Product' with the value 'eCommerce Suite', and 'Description' with the value 'Commercial sales via credit cards.'. To the right of the 'Description' field is a text annotation 'Modify or enter the description.' with an arrow pointing to the field. Below these fields are four buttons: 'Submit', 'Add', 'Delete', and 'Back'. A text annotation 'Click Submit.' with an arrow points to the 'Submit' button.

Figure 3-15 Edit Product description

6. Modify or enter the description.
7. Click **Submit**. CasperWeb will save the changes in the record, and display a product information update message similar to the following:

The screenshot shows the 'Edit Product' interface. It has a title bar 'Edit Product' in a dark blue header. Below the header, there are three input fields: 'Family' with the value 'Basic', 'Product' with the value 'eCommerce Suite', and 'Description' with the value 'Commercial sales via credit cards.' Each field has a small icon to its right. Below these fields are three buttons: 'Submit', 'Add', and 'Delete', all in blue with yellow text. To the right of these buttons is a 'Back' button, also in blue with yellow text. At the bottom of the form area, a message reads 'Product information was updated successfully.' To the right of this message, an arrow points from the text 'Update successful message.' to the message itself.

Figure 3-16 Product Description updated message

8. Click **Back** to return to the Family and Product screen.

Procedure – Modify Product Version Fields

Note: You cannot modify the Product Version itself from this screen, only its related fields (Product Number and Description). To modify a Product Version, you must delete it, then Add a revised Version. Follow the steps in the section Delete Product Information below.

1. From the Product Browser screen, **Choose** the Family and Product for the Product Version to be modified.
2. Click **Edit** beside the Product Version field.
3. Modify the Product Number and/or description for this version of the product.
4. Click **Submit**. CasperWeb displays a successful update message similar to the following:

Edit Product Version

Family: Basic

Product: eCommerce Suite

Prod Version: Release 2a

Prod Number: 2

Description: This is the second product in the eCommerce Suite.

Buttons: Submit, Add, Delete, Back

Message: Product Version information was updated successfully.

Annotation: An arrow points from the text 'Update message.' to the success message.

Figure 3-17 Product Number Description updated

- Click **Back** to return to the Product Browser screen.

DELETE PRODUCT INFORMATION

Use the following method to delete any of the product-related information (e.g. Family, Product, Product Version).

Note: You cannot delete a product record at the Family level without first deleting its child dependencies (i.e. products). If you attempt to do so, you will see the following error message:

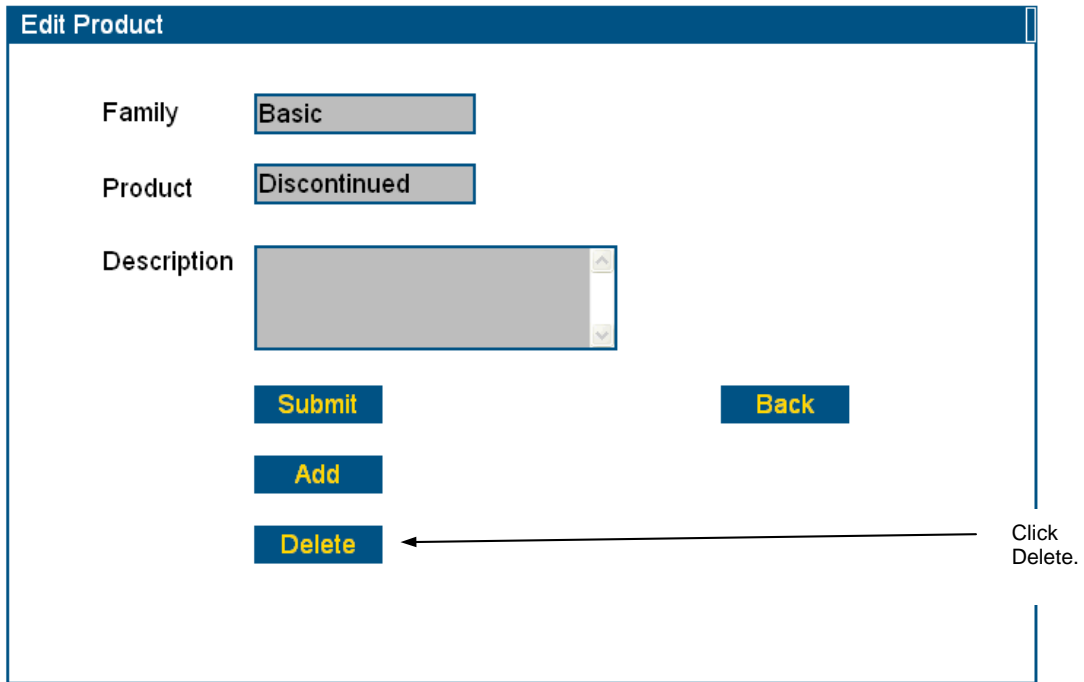

Figure 3-18 Invalid Deletion message

In the example below we will delete a product, "Discontinued", from the Family "Basic".

Procedure – Delete Product Information

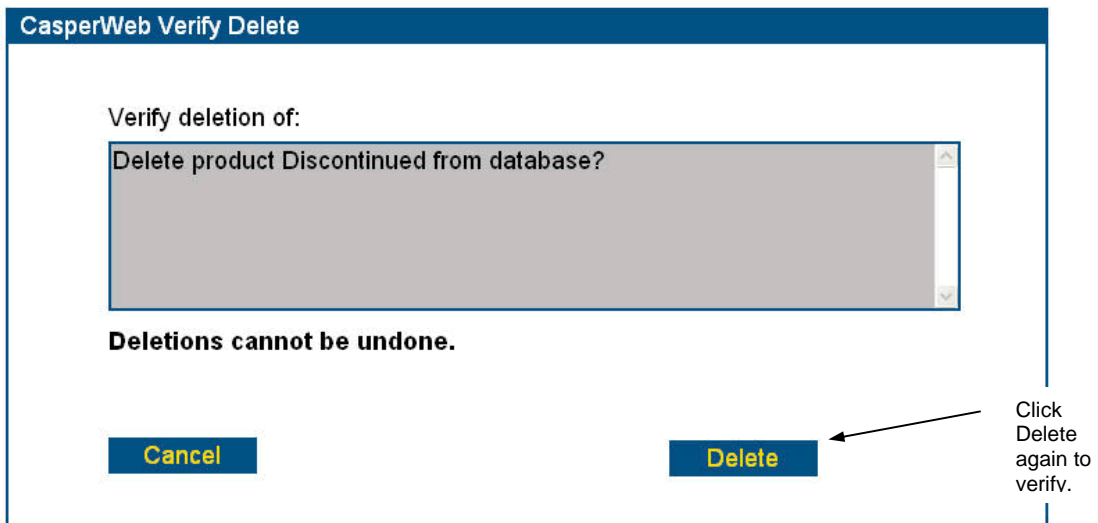

1. Go to the Product Browser screen.
2. Select the Family and Product using the **Choose** button.
3. Click **Edit** beside the Product box. The Edit Product screen displays:

The screenshot shows a web form titled "Edit Product". It contains three input fields: "Family" with the value "Basic", "Product" with the value "Discontinued", and "Description" which is empty. Below these fields are four buttons: "Submit", "Add", "Delete", and "Back". The "Delete" button is highlighted with a yellow background, and a black arrow points to it from the right. To the right of the arrow, the text "Click Delete." is displayed.

Figure 3-19 Delete Product

4. Click **Delete**. A message similar to the following displays, asking you to verify the deletion.

The screenshot shows a dialog box titled "CasperWeb Verify Delete". It contains the text "Verify deletion of:" followed by a text area that says "Delete product Discontinued from database?". Below the text area is the bolded text "Deletions cannot be undone.". At the bottom of the dialog are two buttons: "Cancel" and "Delete". The "Delete" button is highlighted with a yellow background, and a black arrow points to it from the right. To the right of the arrow, the text "Click Delete again to verify." is displayed.

Figure 3-20 Verify deletion dialog box

Note: Deletions cannot be undone. Be sure you want to delete the record before proceeding.

5. Click **Delete** to delete the record, or **Cancel** to abort the action.

Note: You can use the above procedure to delete other items, for example, a Product Version. The version of the product will no longer exist. However, the Product itself will still be intact (unless it is deleted separately).

Set Up Executables , Levels, and Options

This section shows you how to add and configure executables, levels, and options.

- Executables – mandatory
- Levels – optional
- Options - optional

ADD EXECUTABLE

In order to license a product, you must assign an executable ID to it. Only one executable can be assigned per Product Code.

You need to set up both an Executable (the name of the file) and an Executable Version. Both types of record are required.

Procedure – Define an Executable

1. Go to the CasperWeb Main menu (see Log on to CasperWeb on page 68).
2. From the Product menu, select the Product Browser link. The Product Browser screen will be displayed.
3. Click **Add** beside the Executable box. The Add Executable screen displays:

Add Executable

Executable

File name

Password

Description

Add

Back

Figure 3-21 Add Executable screen

- Enter the information in the fields as defined in Table 3-1: Executable ID – Data Entry Fields.

Table 3-1: Executable ID – Data Entry Fields

Field	Description
Executable	Name of the executable program. Alphanumeric. Although this can be different from the file name, and does not require a file type extension, we recommend keeping the Executable ID and file name the same.
File name	Name of the executable file as specified to CrypKey when you

Field	Description
	obtained developer keys for your product. Alphanumeric 8.3 format
Password	Enter the password you gave to CrypKey to obtain your product's developer keys.
Description	Description of the executable program.

5. Enter the name you wish to give to the executable. In the example below it's "123bbb".
6. Enter the file name of the executable, in this example, "123bbb.exe".

Note: The filename must be the *exactly the same* as you gave to CrypKey to obtain your developer keys for this product.

7. Enter the executable password.
8. Enter a description (optional).

Note: While the Executable name, file name and password are required to create an executable record, the description can be added later if desired; select the Executable from the drop-down menu in the Executables, Options and Levels screen and click **Edit**.

9. Click **Add** to save the information.

Note: If you try to save the information without entering all of the required information, you will get a message similar to the following (depending on which piece of information is missing: executable name, file name or password):

The screenshot shows a web form titled "Add Executable" with a blue header. The form contains four input fields: "Executable" with the value "123bbb", "File name" with the value "123bbb.exe", "Password" which is empty, and "Description" which is a large text area. Below the fields are two buttons: "Add" and "Back". A red error message "The Password must be specified." is displayed below the "Add" button. An arrow points from the text "Password is required." on the right side of the form to the error message.

Add Executable

Executable

File name

Password

Description

Add **Back**

The Password must be specified.

Password is required.

Figure 3-22 Password required message

10. If the action is successful, you will see a message similar to the following:

Add Executable

Executable

Add **Back**

Executable was added successfully.

Executable added message.

Figure 3-23 Executable added message

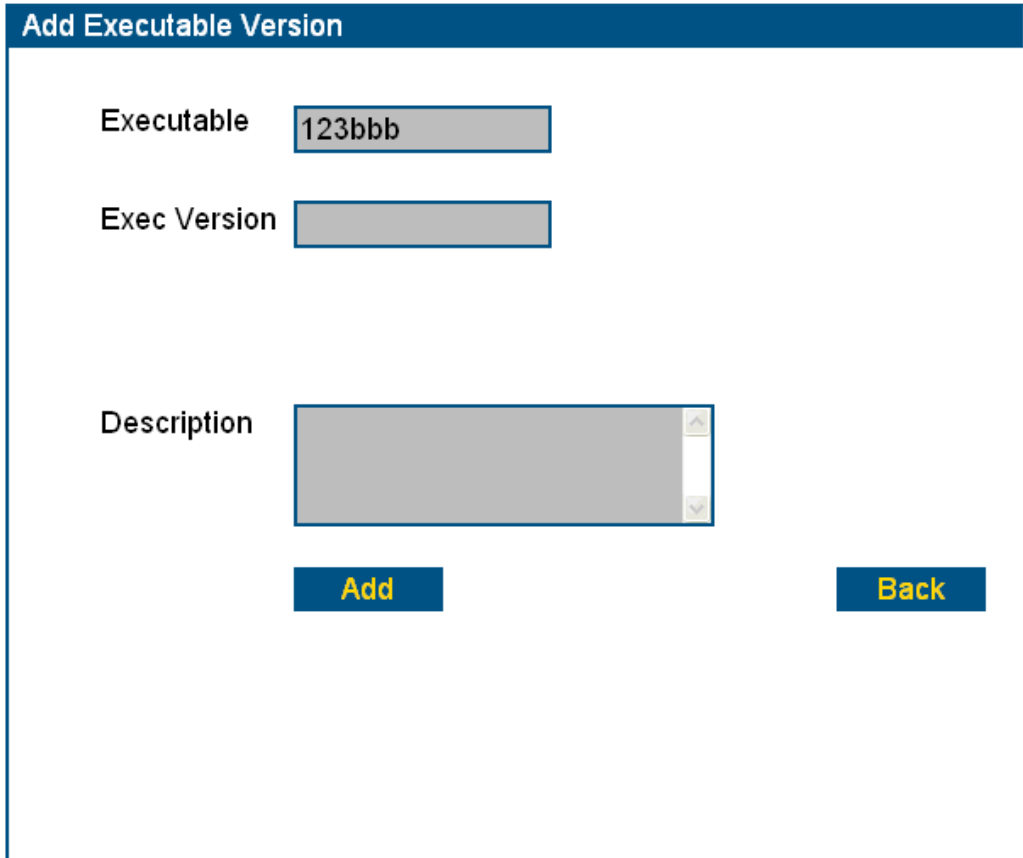

11. Click **Back** to return to the Product Browser screen.

ADD EXECUTABLE VERSION

As well as being assigned an Executable ID, a Product Code must also reference the version of the Executable.

Procedure – Define an Executable Version

1. From the Product Browser screen, click **Choose** to select the Executable you just added (if it is not already visible in the Executable box).
2. Click **Add** beside the Executable Version box. The Add Executable Version screen displays:

Add Executable Version

Executable

Exec Version

Description

Add **Back**

Figure 3-24 Add Executable Version screen

3. Enter the Executable Version information in the fields as defined in Table 3-2: Executable Version -- Data Entry Fields.

4.

Table 3-2: Executable Version -- Data Entry Fields

Field	Description
Executable	Name of the executable program. This was previously entered and cannot be changed (other than by deletion and re-entry).
Exec version	Name of the version of the executable. Alphanumeric; max. 13 characters. Samples of valid input: 1, 1.0, one
Description	Enter an alphanumeric description of the executable version (optional).

5. Enter the Executable Version.
6. Enter the description (optional). The description can be added later from the Product Browser screen by clicking the **Edit** button opposite the Executable Version field.
7. Click **Add**. You will see a message similar to the following:

Add Executable Version

Executable

123bbb

Exec Version

1.3

Description

Add

Back

Executable Version was added successfully.

Figure 3-25 Executable Version Added message

8. Click **Back** to return to the Product Browser screen.

ADD OPTIONS AND LEVELS

Options and Levels are used to define features that you want to release with a given executable. Options and levels specified for the executable apply to its related product.

Note: The product is represented by its Product Code in the Product Browser screen.

The license issued to the customer for the product code will incorporate any defined options and levels by default. The serial number defined for a product code defines any options and levels at the product code level by default. These options and levels can be changed on a individual serial number basis after the serial number and product code are imported, but generally they are specified at a product code level..

Options and Levels give you flexibility in defining various features of an application for distribution in packages or specific configurations. Options are Levels are optional. You don't have to use Options and Levels when creating Serial Numbers or issuing Site Keys. **However, if you do use them, you must set them up using the Product Browser *before* associating them with a Product Code, in a Serial Number record, or in the Site Key Generator.** Options and Levels can be modified at the time of Serial Number creation or Site Key generation (see above description).

OPTIONS

An Option is a single binary digit — either 0 or 1 — which denotes whether a particular function is available or not. For example, if your product has multiple components and you want your customers to pay per component, you can use Options to specify that only the components ordered by a customer are activated for that customer.

Define the key types of Option information as follows:

- bit position: the placement of the bit in a binary string. For example, the first position in the string might reference a certain report-generating capability of your application.
- the value assigned to each bit position. The value 1 at a given position would mean the Executable is enabled to perform the function defined at that position (e.g., generating certain reports). The value 0 would mean this feature is turned off.

When authorizing a product using Casper (automatic method) or the Site Key Generator (manual method), you must provide a setting ("on" or "off") for all options defined for the product (i.e., checked = on, unchecked = off). You can do so using the Product Browser from the Add or Edit screen, when creating the product code. If not done at that point, options can be turned on either through the Site Key Generator or from the Edit Customer information page for the specific serial number.

Note: A maximum of 32 bits are available for options and levels combined (per product).

LEVELS

A Level is a number that controls a variety of features in your product. For example, you might define the following levels:

- Level 0: no additional modules can be used
- Level 1: the graphic module can be used

- Level 2: the graphic and printing modules can be used

Levels can also be used for version control. For example, you might decide that the first version (v1.0) of your software runs regardless of level, while v1.1 requires Level 1, v1.2 is not released, v1.3 requires Level 2, and so forth.

Each Executable can have an indefinite number of Levels defined for it. However, for any given transaction (i.e., Customer Information updates or Site Key generation), only one Level can be assigned to an Executable.

In order for an Executable to recognize a Level or the Options defined in CasperWeb, the client application needs to implement programming to decode the oplevel value received from the license. If this isn't implemented, the restrictions that you specify in CasperWeb will not be recognized by the program.

For more details about the mechanisms of options and levels, see *Appendix A: Technical References, Internal Handling of Levels and Options*.

Procedure – Add a Level

1. Go to the Product Browser screen.
2. Click **Choose** for the **Executable** and **Executable Version** fields and select them. You are then returned to the Product Browser screen.
3. Click **Add** beside the Level box. The Add Level screen displays:

Add Level

Executable

123bbb

Exec Version

1.3

Level Name

Level Number

Description

Add

Back

Figure 3-26 Add Level screen

4. Enter the information as per Table 3-3: Levels -- Data Entry Fields:

Table 3-3: Levels -- Data Entry Fields

Field	Description
Level Name	Controls a variety of features in your product, or for version control (see above in this section for more information). Format: alphanumeric (e.g. Regular, Lite1).
Level number	Required with Level. Format: an integer greater than 0.
Description	Enter an alphanumeric description of the level (optional).

5. In the Level box, enter the name of the level.
6. In the Level Number box, enter the number of the level.

Note: Both the level name and number must be entered; otherwise, CasperWeb will display a reminder message.

7. Enter the description (optional).

Note: The description can be added later by clicking the **Edit** button next to the Level box in the Product Browser screen.

8. Click **Add**. If the action was successful, CasperWeb displays a message similar to the following:

The screenshot shows a web form titled "Add Level" with a blue header bar. The form contains five input fields: "Executable" with the value "123bbb", "Exec Version" with "1.3", "Level" with "Lite", "Level Number" with "1", and "Description" which is an empty text area. Below the fields are two buttons: "Add" and "Back", both with yellow text on a blue background. At the bottom of the form, a message states "Level was added successfully."

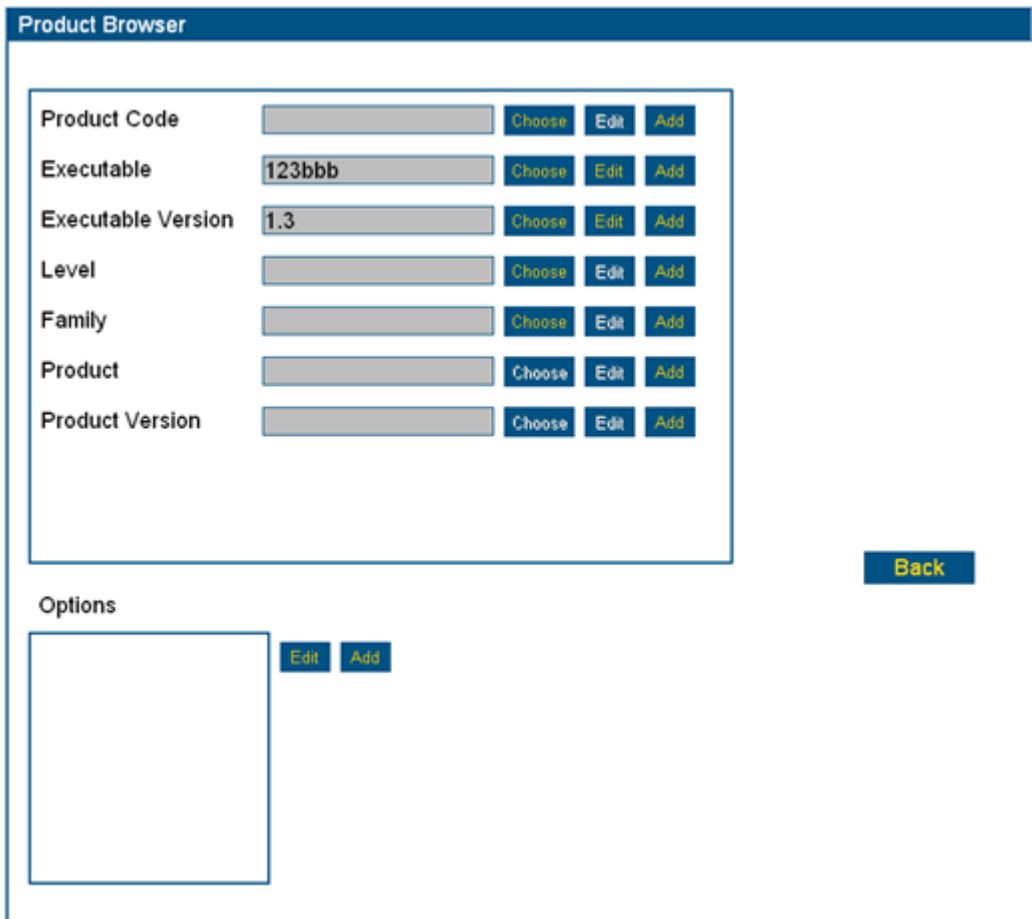

Figure 3-27 Level added message

9. A quick way of verifying your additions or changes is to go back to the Product Browser screen and **Choose** the new Level. Check that your new Level is listed in the list of results.

Procedure – Add Options

Note: A maximum of 32 bits available for options and levels combined [per product] is allowed.

1. Go to the Product Browser screen. Note the Options section in the bottom part of the screen:

The screenshot shows a web application window titled "Product Browser". Inside, there is a form with several input fields and buttons. The fields are labeled "Product Code", "Executable", "Executable Version", "Level", "Family", "Product", and "Product Version". The "Executable" field contains the text "123bbb" and the "Executable Version" field contains "1.3". Each field has a "Choose", "Edit", and "Add" button to its right. Below the form, there is a section titled "Options" with a large empty box and "Edit" and "Add" buttons. A "Back" button is located to the right of the main form area.

Product Code	<input type="text"/>	Choose	Edit	Add
Executable	123bbb	Choose	Edit	Add
Executable Version	1.3	Choose	Edit	Add
Level	<input type="text"/>	Choose	Edit	Add
Family	<input type="text"/>	Choose	Edit	Add
Product	<input type="text"/>	Choose	Edit	Add
Product Version	<input type="text"/>	Choose	Edit	Add

Options

Edit Add

Back

Figure 3-28 Product Browser – Options screen

2. Choose the Executable/Executable Version you want.
3. Any pre-defined Options are listed in the Options box on this screen. You need to define levels and options if your product code will use them. However, options are not mandatory.
4. Click **Add** beside the Options box. The Add Option screen displays:

Add Option

Option

Option Bit

Description

Enter the Option, Option Bit and Description (optional).

Add **Back**

Click Add.

Figure 3-29 Add Option screen

5. Enter the option information in the fields as defined in Table 3-4: Options – Data Entry Fields:

Table 3-4: Options – Data Entry Fields

Field	Description
Option	Name of the Option associated with the executable; alphanumeric.
Option Bit	Required but not necessarily in use. If it is used, it must have been previously set up in CrypKey SDK or CrypKey Instant or it won't have any effect in CasperWeb. You must specify the option name and the option bit used for that option.
Description	Enter an alphanumeric description of the Option (optional).

6. Enter the Option name.
7. Enter the Option bit.
8. Enter the Option description (optional).
9. Click **Add**. If the action was successful, CasperWeb displays a message similar to the following:

Add Option

Executable

Exec Version

Option

Option Bit

Description

Add **Back**

Option was added successfully.

Option, option bit and description are added.

Click Add.

Option added message.

Figure 3-30 Option added message

10. Click the **Back** button to return to the Product Browser screen. The new Option for the Executable and Version will appear in the list of Options:

Figure 3-31 Options list

11. If you wish to add another option to this executable version, click the **Add** button. If you wish to edit, click the **Edit** button.

Note: Options are not turned on from this screen. Specify which options will be enabled when you create the associated Product Code. (See *Add Product Codes* on page 114.)

ADD PRODUCT CODES

You may add Product Codes using either the Product Browser or the Setup Wizard. We recommend beginning with the Setup Wizard, as it is simpler. If you need more than one Product Code for any single application/executable, you must enter the rest of the Product Codes using Product Browser. You can also modify licensing information using the Product Browser.

Notes about Product Codes:

- It is necessary to create a minimum of one Product Code for each product.
- Every Serial Number must be associated with a Product Code (see *Add Customer Information* on page 63).
- A Product Code allows you to associate specific instances of Product Family, Product, Product Version, Executable, Executable Version, and License restrictions, Level and Options (if defined). This information must already be input into the system before a Product Code can be created, or

CasperWeb generates an error message, and you will need to enter the missing items.

Note: Once you have defined a relationship between certain product information using a Product Code, you cannot use the same combination of information with another Product Code.

PRODUCT SETUP WIZARD

The Product Setup Wizard is a quick way to set up the following product details: Executable file name, Password and Product Number, and associate them with a Product Code. (Casper creates the rest of the required information by default.)

Procedure – Add Product Codes using the Setup Wizard

1. From the CasperWeb Main menu (see Figure 1-1 CasperWeb Main menu), click on Setup Wizard in the Product submenu. The Product Setup Wizard screen displays the defaults. You may replace the defaults with your own data.

Product Setup Wizard

The product setup wizard is an easy way to set up your product using the minimum amount of information.

Executable name

Password

Product Number

Product Code to Create

Please use the information that you sent to CrypKey when obtaining your developer keys.

This is a new name that you use to track this product in Casper. If you're unsure what to use, leave this as the default (MyProduct).

Create Product **Back**

Figure 3-32 Setup Wizard screen – defaults

2. Enter the information as shown in Table 3-5: Product Setup Wizard -- Data Entry Fields:

Table 3-5: Product Setup Wizard -- Data Entry Fields

Field	Description
Executable name	Name of the executable program. We recommend using the filename format (8.3) and keeping the executable name the same as the filename. This executable name must be the filename specified to CrypKey when developer keys were generated for the product. If this is not identical the authorization for that Product Code will not work.
Password	Enter the password you gave to CrypKey to obtain your product's developer keys initially. Alphanumeric.
Product Number	The Product Number refers to the product ID you were given when you received your developer keys for your product. Integer.
Product Code to Create	The Product Code is a unique code. It is used to assign a set of associations among Family, Product Name, License restrictions, Product Version, Executable Name, Executable Version, Level (optional), and Options (optional) via the Product Browser feature. Alphanumeric.

3. Enter the executable file name.

Note: This is the name of the file you supplied to CrypKey in order to get your developer keys for your product.

4. Enter the password that you provided to CrypKey to obtain your developer keys.
5. Enter the product number you were given when you received your developer keys for CrypKey Instant or CrypKey SDK.

Product Setup Wizard

The product setup wizard is an easy way to set up your product using the minimum amount of information.

Executable name: TESTING.exe

Password: PWD

Product Number: 1

Product Code to Create: MyProduct

Please use the information that you sent to CrypKey when obtaining your developer keys.

This is a new name that you use to track this product in Casper. If you're unsure what to use, leave this as the default (MyProduct).

Create Product **Back**

Click Create Product.

Options

Edit Add

Figure 3-35 New Product Code is displayed on Product Browser screen

Note: When you add a customer (see *Add Customer Information* on page 133) you will select a Product Code to be associated with a Serial Number. (Every customer is assigned a unique serial number in order to be authorized.)

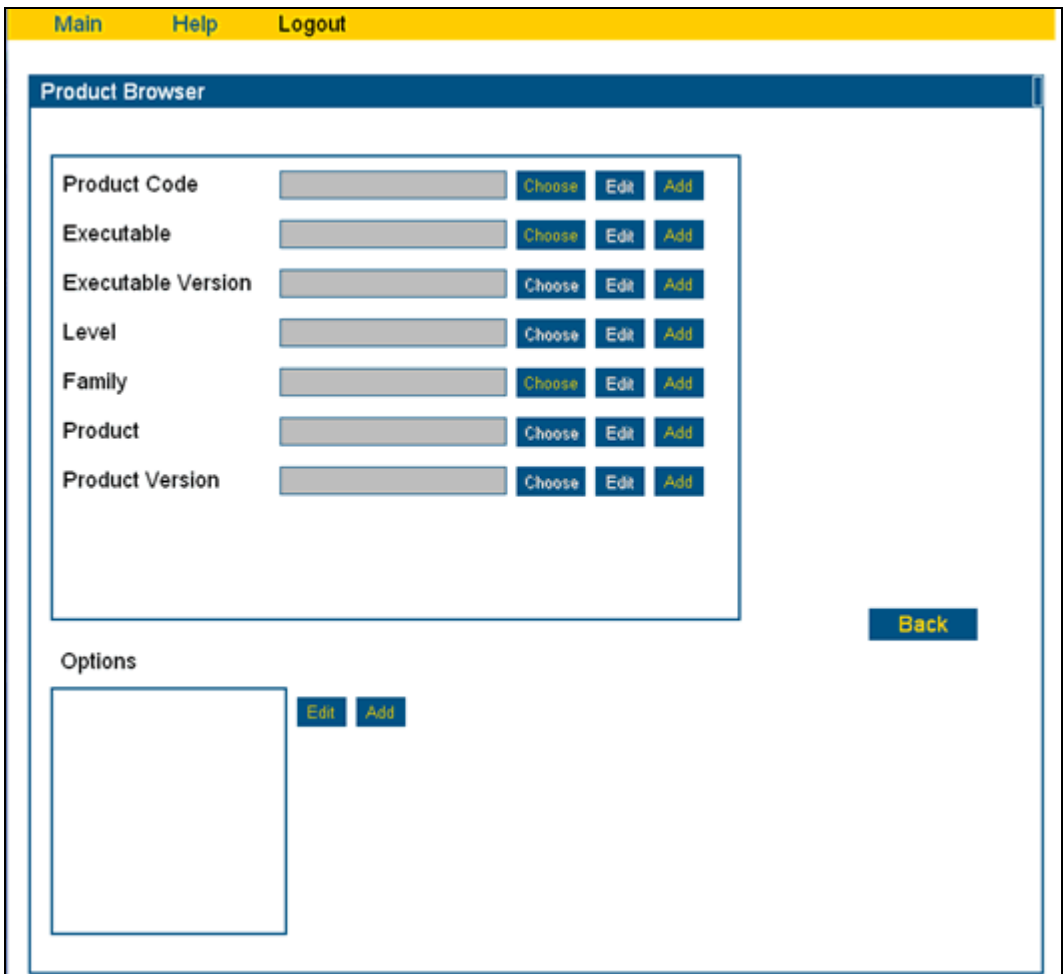

PRODUCT BROWSER

Procedure – Add Product Codes using the Product Browser

Note: Before you can create a Product Code using the Browser, you must set up the associated information: Executable, Executable Version, Level, Family, Product, Product Version, and License restrictions. See the applicable sections in this manual for more information.

Note: You can create a basic Product Code quickly using the Setup Wizard. See *Product Setup Wizard* on page 115.

1. Open the CasperWeb Main menu.
2. Under the Product menu, click **Product Browser**. The Product Browser screen displays:

The Product Browser screen features a yellow header bar with 'Main', 'Help', and 'Logout' links. Below this is a blue title bar labeled 'Product Browser'. The main content area contains a table with seven rows, each representing a product attribute: Product Code, Executable, Executable Version, Level, Family, Product, and Product Version. Each row has a text input field followed by three buttons: 'Choose' (yellow), 'Edit' (blue), and 'Add' (yellow). To the right of the table is a blue 'Back' button. Below the table is an 'Options' section with a large empty text area and two buttons: 'Edit' (blue) and 'Add' (yellow).

Attribute	Input Field	Choose	Edit	Add

4. Enter an alphanumeric Product Code in the text box.
5. Fill in the required fields using the **Choose** option:
 - Executable
 - Executable Version (Note: If any options were previously defined for the chosen version, they will be displayed in the Options list at the bottom of the screen)
 - Family
 - Product
 - Product Version

Note: These fields must have been created previously from the Product Browser screen. If you don't **Choose** an item for each of the required fields, you will receive a message similar to the following. See the previous sections for details on filling in these fields.

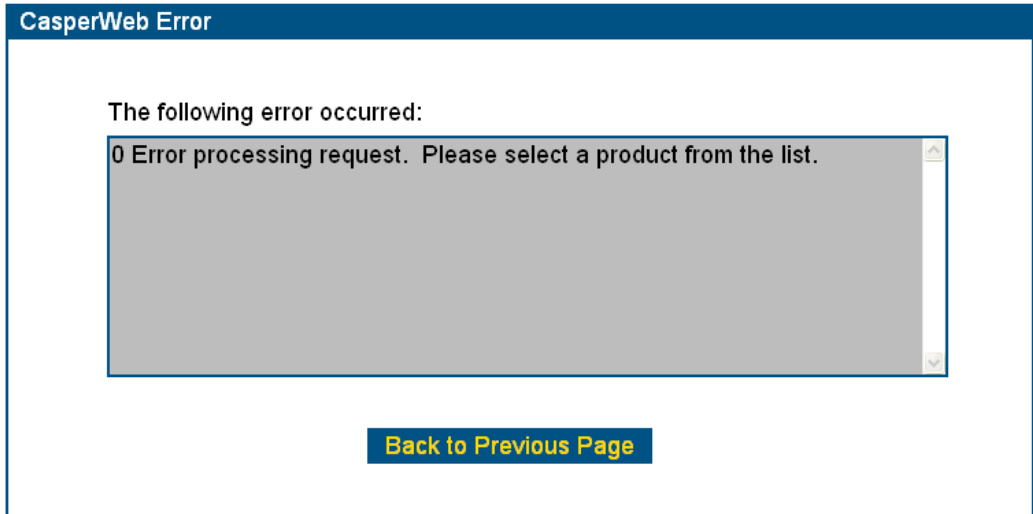

Figure 3-38 Product Code Add error message

6. **Options:** If any options were defined for a particular version of an executable (see the *Add Options and levels* section), they will be displayed in the Options area. If you wish to enable an option, check the box next to it.
7. **Add On License** is defined in the Add Customer Information screen (see *Add Customer Information* on page 133).
8. **EasyLicense** is used to apply an unlimited license (no restrictions) to a particular computer. **This will override any other license restrictions for that product.** In order to use EasyLicense, Casper must be able to read an HDSN (hard drive serial number) for the computer (contained in the Site Code). The Customer History screen below shows a sample. EasyLicense is not a license generally used by Casper, but is available if it meets your company's needs. Call CrypKey Technical Support if you have any questions about this function.

Procedure – Modify Product Codes

You can modify a product's license details as needed. However, remember that the Product Code may be associated with more than one customer Serial Number.

The following figure shows the sample Product Code 'ProductCode1' with a modification (in this example, number of copies has been changed from Fixed to Floating type, and the number increased).

Procedure – Delete Product Codes

Note: Deletions are not possible if any Serial Numbers are already associated with the Product Code you wish to delete.

1. To delete a Product Code, go to the CasperWeb Main menu/Product menu and click the link for Product Browser. The Product Browser screen displays.
2. Click **Choose** to select a particular Product Code from the existing list. If the list extends past a single page, use the **Next** or **Prev** buttons to view multiple pages. Or, enter text in the text box and click **Find**.

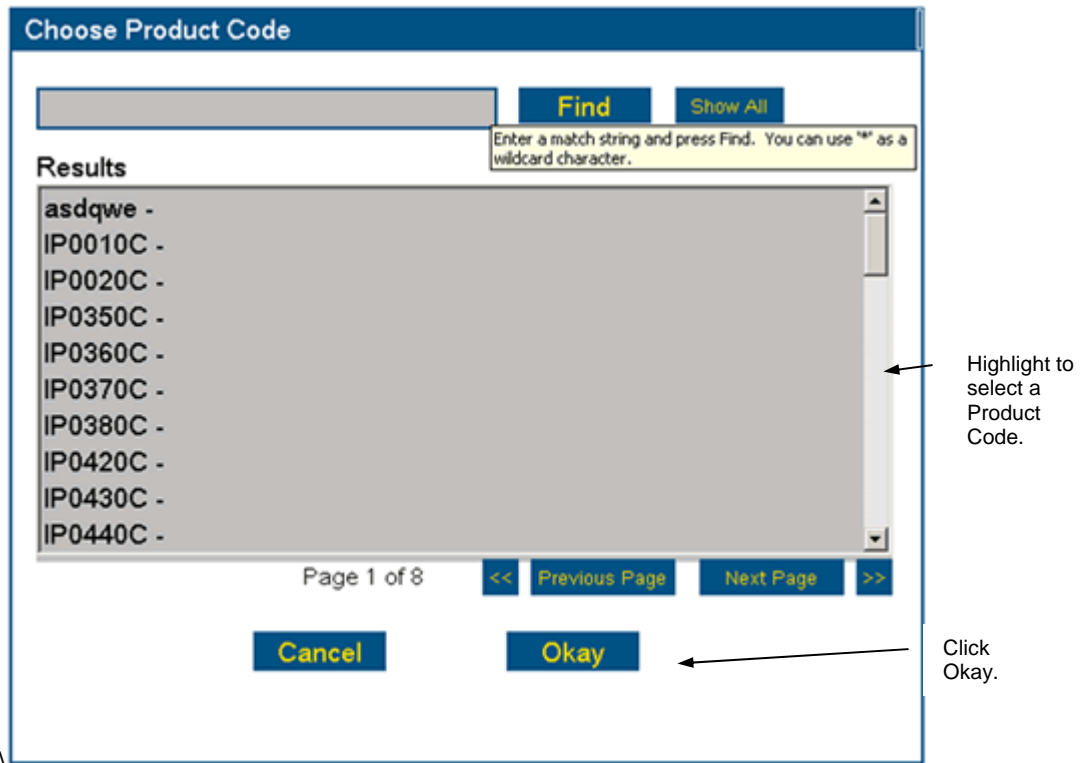

Figure 3-44 Select Product Code to delete

3. Click on a Product Code to highlight it.
4. Click **Okay**. CasperWeb returns you to the Product Browser screen. The Product Code box will be filled in with the Product Code you selected.
5. Now, click **Edit** beside the Product Code box. The Edit Product Code screen displays:

The screenshot shows a web application window titled "Product Code View". Inside, the header reads "Product Code Product Code1". Below the header are three buttons: "Update", "Delete", and "Back". The "Delete" button is highlighted with a yellow background. A black arrow points from a callout box labeled "Click Delete." to the "Delete" button. The main content area is divided into two sections. The left section contains a list of fields with corresponding text input boxes: "Executable" (Mytest10.exe), "Executable Version" (Version 1), "Level" (empty), "Family" (Family 1), "Product" (Product 1), and "Product Version" (Version 1). The right section contains several options: "Add On License" (checkbox), "EasyLicense" (checkbox), "Copies" (3), "Fixed" (radio), "Floating" (radio, selected), "Run Restrictions" (Unlimited, Days, Runs), "Value" (0), and "Price" (0). At the bottom left, there is an "Options" label above a large empty rectangular box.

Figure 3-45 Edit Product Code

6. Click **Delete**. The following message pops up:

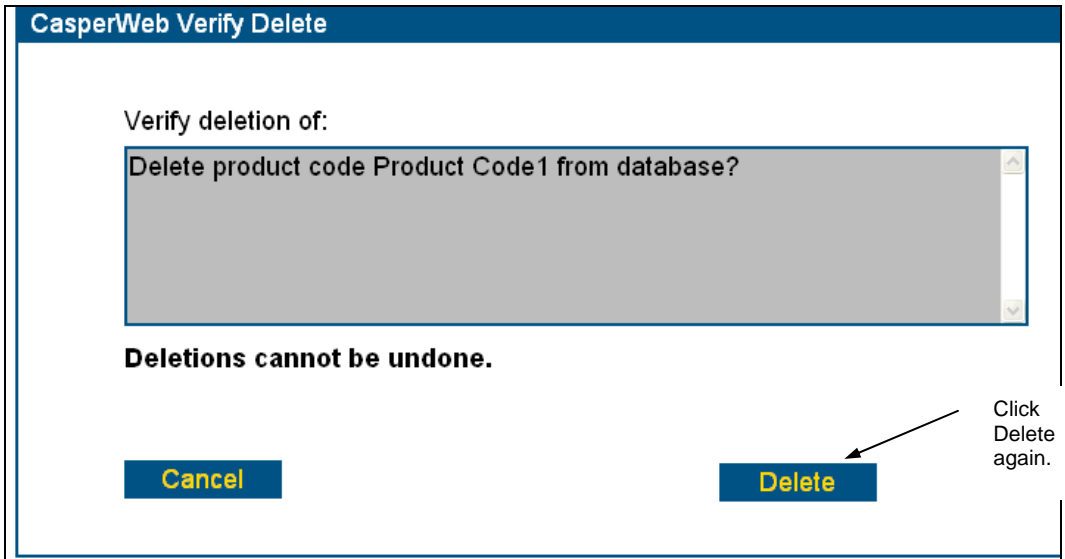

Figure 3-46 Verify Product Code deletion

7. Click **Delete** again to complete the deletion, or **Cancel** to abort the action.

Note: Deletions cannot be undone.

8. Click **Back** to return to the Product Browser screen. The Product Browser screen will be cleared of the deleted Product Code.

Chapter 4: Managing Customers

CasperWeb offers an easy interface for managing customer information.

Once you have created one or more Product Families, Products, Product Versions, and the associated Executable information, you can add customers to the Casper database. Use the Add New Customer option in the CasperWeb Main menu/Product menu to create customer records. When you add a customer, you will select a Product Code to be associated with a Serial Number. (Every customer has to be assigned a unique Serial Number in order to be authorized.)

From the Add New Customer screen you can generate Site Keys for customers as you input customer information (see Generate Site Keys on page 147). However, you would normally use this feature only if a customer has submitted an authorization request over the telephone or by regular email. If the customer uses the Electronic Purchase Wizard to transmit the request (including the Site Code), your Casper Server should automatically generate and send the Site Key back to the customer.

Note: When creating customer records, the critical information to enter is the **Serial Number** and **Product Code**. The other information—such as name, address, product, and license details—can be entered later using the Edit Customer Info option, or it can be left blank for the customer to enter at the license authorization stage.

Add Customer Information

Use this function as a way to add new customers to the database.

Note: You can also add customers to the database using the import function. (See *Auto Import* on page 174.)

Procedure

1. From the CasperWeb Main menu/Customer Info menu, click on Add New Customer. CasperWeb displays the Add Customer Information screen:

Figure 4-1 Add Customer screen

2. Scroll down to see the entire contents of the window.
3. Enter the data/make selections as per Table 4-1: Customer Information—Data Entry Fields.

Note: The only required fields are **Serial Num** and **Product Code**. There is no other information needed. The rest of the customer information may be added if desired using the Import function in the System Maintenance menu (see *Chapter 5: Managing CasperWeb, Auto Import* on page 174).

Table 4-1: Customer Information—Data Entry Fields

Field Name	Description
Top portion of window -- Customer Information section:	
Serial Num	Customer's Serial Number. Required field used as the key to all customer information. Format: free-form.
Invoice Num	The number of your invoice to the customer.
Name	Customer name.
City	City in which the customer resides.
State	State or province in which the customer resides.
Postal Code	Customer's postal code.
Phone	Customer's telephone number.
Time Bomb	Checkbox indicating whether CasperWeb will calculate the number of days remaining until the expiry date specified in End Date (see below). The calculated value is incorporated into the license.
End Date	Expiry date of license. Format: mm/dd/yy.

Field Name	Description
Company	Customer's company name.
Address	Customer's company address.
Email	Customer's email address.
Country	Country in which the customer resides.
Fax	Customer's corporate fax number.
Middle portion of window – Product section	
Product Code	Product code (created in the previous section) for this specific serial number. The code references a set of associations among Family, Product Name, Product Version, Executable Name, Executable Version, Level (optional), and Options (optional).
Executable	Name of the executable program. Alphanumeric. Although this can be different from the file name, and does not require a file type extension, we recommend keeping the name of the Executable and executable file name the same.
Executable Version	Version of the executable
Level	A number that controls a set of features of your product.
Family	The Product's category or family.
Product	The name of the Product (e.g. eCommerce).
Product Version	Version of the product

Field Name	Description
CyprKey Licensing Information section:	
Renewal License	Checkbox indicating whether the current transaction will renew the customer's existing license until the specified expiry date.
Add on License	Checkbox indicating whether the current transaction will add to the existing license of the product. An add-on license operates as an addition to the original, which remains in effect. Check the box and select the additional days, runs or options you want to enable. Note this can also be changed through the Product Code Add screen.
Copies	The number of copies of the software that you would like the customer to be issued access to with one authorization.
EasyLicense	Enables an unlimited license for a particular computer. This type of license will only work if the Site Code that comes in to Casper for the specific Serial Number has a valid HDSN. If no HDSN is available the user will not receive a license.
Fixed/Floating	Fixed means running the software on standalone computers. Floating means the ability to run x number of seats concurrently over a network. Both fixed and floating can be issued more than one copy.
Run Restrictions	Radio buttons indicating whether the license can be run indefinitely (unlimited) or for a specified number (see Value, below) of days or runs.
Value	Number denoting days or runs, as

Field Name	Description
	selected in Run Restrictions.
Memo	Any notes that you would like to add for this specific serial number.
Lower portion of window – Options section	
Options	If Options have been defined for the Product Code, you can select the options for this <i>specific</i> Serial Number.
Computer Name	Specifies the computer name of the user requesting authorization.
User Name	Specifies the username once authorized if configured in Casper Wizard.
User Fields User User User etc.	Ten supplemental data fields (User1, User2, etc.) used to accommodate information values not included in the standard CasperWeb customer record. For example, the standard CasperWeb customer record includes the customer name, but you may want to record another technical contact name and phone number. You could use the User Fields feature to record this information. We recommend that in each field you use, you put consistent types of information (User1, User2, etc.). In this way, you will maintain consistency of record content.

ASSIGNING A CUSTOMER LICENSE

There are three ways you can assign a license to a customer:

1. **License by Product Code:** Select a Product Code with predefined license items. When you enter the Product Code, the rest of the Product fields will be populated automatically.
2. **License by Manual entry:** Select items individually with the **Choose** button.
3. **Clear Product Code:** After selecting a Product Code, click the **Clear Product Code** button to disassociate the Product Code with the Customer/Serial Number.

Then, select Product license items individually (and retain whichever of the defaults you wish). Click **Done** when you are finished to update the Product Code for that customer.

Note: Remember, there may be more than one Serial Number associated with a Product Code. Updates from this screen apply only to that particular Serial Number/customer. The Product Code will retain its defaults for all customers other than the one you've updated.

4. When you are satisfied with the entry, click **Done**.

5. When you are satisfied with the entry, click **Done**. CasperWeb displays a message similar to the following:

The screenshot shows a web form titled "Customer Information -- Add". The form has two columns of input fields. The left column contains: Serial Num (A101), Invoice Num, Name, City, State, Postal Code, Phone, a checkbox for "Time Bomb", and End Date (ie 12/20/03). The right column contains: Company, Address, Email, Country, and Fax. At the top right are buttons for "Back", "Site Key Gen", and "Done". A message box on the right says "Customer information was added successfully." with an arrow pointing to the "Company" field. A separate callout box points to the message box and says "Customer added message." At the bottom, there is a "Product Code" field with "MyProduct" entered, a "Choose" button, and a "Clear Product Code" button.

Figure 4-3 Customer added message

Note: You may encounter problems if you:

- Click the **Renewal License** checkbox when using a Product Code for an add-on license.

Edit Customer Information

This function allows you to review and revise customer information: for example, you may want to add more information to the customer record in the example above.

Note: You can modify the Customer name and other data in the record, but not the Serial Number itself.

Procedure

1. From the CasperWeb Main menu/Product menu, click on Edit Customer Info. CasperWeb displays the Customer Information screen.
2. To search for a customer record, enter the Serial Number, name or invoice number of the customer in the **Find** box and click the button of the same type (**Serial, Name, Invoice**). See the example below.

Note: Search conventions are:

- You can type the full value, a partial value together with the wild card "*", the full value including the placeholder "?", or "*" by itself, as in the following examples:

- Full value – for example, if you type in “456” and click **Serial**, CasperWeb will search for a match strictly based on the Serial Number 456.
- Partial value plus wild card – for example, if you type in 100* , CasperWeb will match to all Serial Numbers beginning with 100, such as 10010 and 10044.
- Full value including the placeholder “?” character – for example, 100?5 will match the Serial Numbers 10015 and 10025, but not the Serial Numbers 10016 or 100159.

Enter Serial Number.

Click Serial button.

Figure 4-4 Serial Number search

CasperWeb will display the first value in the list of results. If there is more than one result, you can click on the drop-down arrow in the box for the searched field (**Serial, Name, Invoice**).

Notes

- The Serial Number—not the customer name—is the key field used by CasperWeb to reference customer records.
- The Serial number is associated with a Product Code, so the Product Code information will be displayed in the middle portion of the window as well as the Serial Number. The Product and Executable fields are not editable.
- In typical searches, more than one piece of information will often be found. When this happens, CasperWeb displays all found matches in a drop-down list beside the data field searched – i.e., beside the Serial Num, Invoice Num, or Name field as applicable. If the search generates too many matches to fit into the drop-down list box, use the **Prev** and **Next** buttons to display additional matches.
- The User fields in the lower area of the screen are typically customer inputs from the Casper Electronic Purchase Wizard. If you require your customer to input User information in the Casper Wizard, it will overwrite whatever you may enter in these fields.
- If you have notes you want to enter, use the Memo area.

2. Click the **Delete** button to delete the record. CasperWeb displays a deletion verification message:

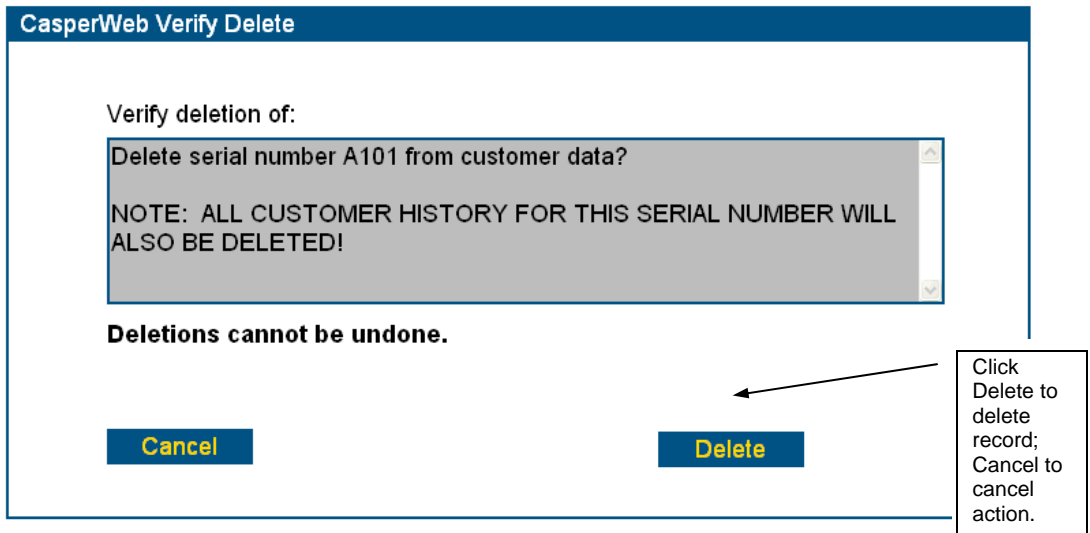

Figure 4-8 Verify Customer record deletion

Note: Deletions cannot be undone. To abort the action, click **Cancel**.

Display Customer History

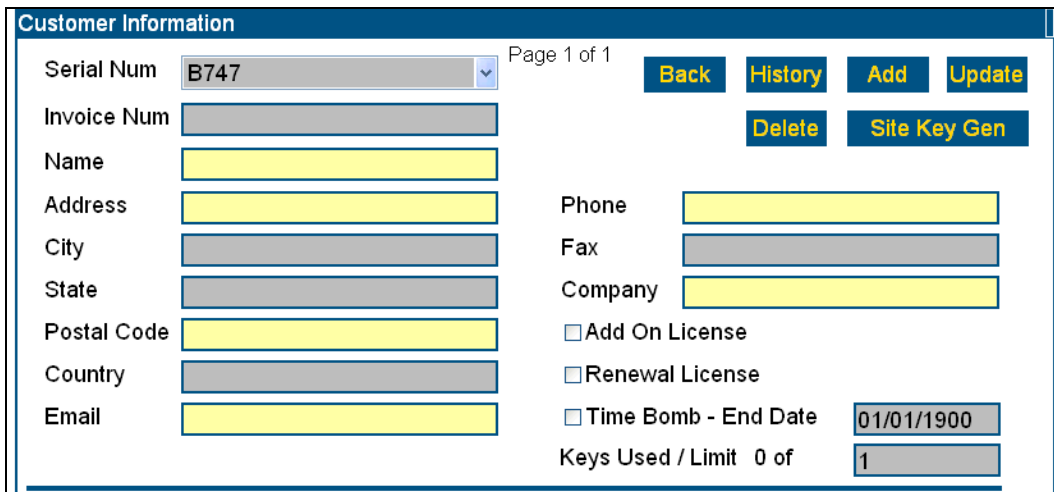

The Customer History feature displays the Site Code and Site Key history for the selected customer record. The customer history screen contains records of all Site Key Generations. The key data value in this function is the *Serial Number* (not the customer name).

The Customer Information history contains authorization details, by customer, of specific products (including executables and version numbers) and restrictions you impose on customers' access to the purchased products.

When Casper generates a Site Key, CasperWeb records several items, including the Serial Number, the date, the product Family and product name, the Site Code provided by the customer, and the generated Site Key. Each generation of a Site Key results in a set of these values being recorded in the system. The History function makes this information available for display.

Procedure

1. From the CasperWeb Main menu/Customer Info menu, click the Edit Customer Info link. CasperWeb displays the Customer Information screen.
2. To search for a customer record, enter the Serial Number, name or invoice number in the **Find** box and click the button of the same type (**Serial**, **Name**, **Invoice**). In the example below, we use Serial Number B747.

Click Date arrow to see list of dated transactions for the Customer record.

Figure 4-10 Customer History for specified Serial Number

Note: The Memo field will be blank unless the Casper Site Key Generator was used to manually generate a Site Key and a memo was entered at that time.

Note: The fields in the sample Customer History screen above will be filled in once there has been an authorization for the Serial Number.

If more than one authorization has been recorded for the specified Serial Number, you will be able to display a drop-down list of authorization dates in the Date field. The screen will show the Site Codes, Site Keys and other information related to each dated authorization.

Generate Site Keys

The Site Key Generator enables you to manually create and send Site Keys to your customers, authorizing them to use your software. Normally the Site Key is generated automatically over the Internet using Casper, but there may be cases where the customer hasn't been able to send you a request for a license using the Casper Client Wizard (which you bundled with your software). You could also use the manual Site Key Generator that came with CrypKey Instant or SDK.

A Site Key is a character string that is output from the processing of a Site Code received with your customer's authorization request. The Site Key also incorporates restrictions that you specify for the user license. The Site Code is generated by CrypKey, based on information extracted from the customer's computer.

Note: You would normally use the Site Key Generator only if a customer has submitted an authorization request over the telephone or by regular email. Normally the customer uses the Casper Electronic Purchase Wizard to transmit the request, including the Site Code, and your Casper Server should generate and send out the Site Key automatically.

To generate a Site Key using the Site Key Generator in CasperWeb, you manually enter the Site Code, along with restrictions for your customer's software use, into input fields in the Site Key Generator screen. The Site Key Generator creates a Site Key from this information, which you send to your customer by email, telephone, or fax.

You can launch the CasperWeb Site Key Generator from two places:

- a. the Customer Information – Add window, after you have created a record; or

- b. the Customer Information screen (accessed from the Edit Customer option on the Customer Info menu).

Procedure

1. Do either of the following:
 - click the **Done** button to complete the addition of a new record (see *Add Customer Information* on page 133).
 - display the Edit Customer window for a specific record (see *Edit Customer Information* on page 140).
2. Click the **Site Key Generator** button. CasperWeb will display the Site Key Generator screen for the selected Serial Number:

Back Generate Site Key

Site Key

Enter the Site Code, then click Check Site Code.

Figure 4-11 Site Key Generator screen

Notes:

- The Serial Number appears in the top left-hand side of the screen. For descriptions of the fields see Table 4-2: Site Key Generator —Data Entry Fields.
 - The Keys Used/Limit field contains the number of Site Keys previously generated for this Serial Number, and the maximum number as defined in the Customer Information record.
 - Shaded textboxes are automatically populated by the Site Key Generator, and are not editable.
3. In the Site Code field, type in the Site Code received from your customer.
 4. Click the **Check Site Code** button. If the test is successful, you will see a message similar to the following:

The screenshot shows the 'Site Key Generator' application window. At the top, it displays 'Serial Number 123' and 'Company Number: 0' with a 'Choose' button. The 'Site Code' field contains '7429 9E3B F335 3C44 F5'. A yellow button labeled 'Check Site Code' is visible. Below it, a message reads 'Check Success. HDSN = 25627'. An arrow points from a text box above to this message. The form includes several input fields: 'Prod Code' (TESTING), 'Family' (CrypKey), 'Name' (example), 'Version' (v1), 'Auth Name' (empty), 'Password' (KENONIC), 'Copies' (1), 'Level' (none), 'Executable Name' (example.exe), and 'Executable Version' (1). There are also checkboxes for 'Fixed' (selected) and 'Floating', and 'Add On License' and 'EasyLicense'. A 'Run Restrictions' section has radio buttons for 'Unlimited', 'Days' (selected), and 'Runs'. The 'Days' restriction is set to '3'. A 'Keys Used / Limit' indicator shows '1 of 999'. An 'Options' section is partially visible. A 'Memo' field is at the bottom left.

Figure 4-12 Check Site Code test message

5. Select the criteria you want applied to the license, such as number of copies, level, options, and run restrictions. Optionally, type a name into the **Auth**(orization) **Name** field, and a note into the **Memo** field (for the Vendor's use).
6. When you are satisfied with your data input, click **Generate Site Key**. The screen now appears as follows (note the Site Key field is filled in):

The screenshot shows a 'Site Key Generator' window. At the top left, 'Serial Number 123' is displayed. The 'Product' section includes 'Prod Code' (TESTING), 'Family' (CrypKey), 'Name' (example), and 'Version' (v1). The 'Executable' section includes 'Name' (example.exe) and 'Version' (1). The 'Memo' field is empty. The 'Site Code' is 7429 9E3B F335 3C44 F5, with a 'Check Site Code' button. The 'Auth Name' and 'Password' (KENONIC) fields are present. 'Copies' is set to 1, and 'Level' is 'none'. There are radio buttons for 'Fixed' (selected) and 'Floating', and checkboxes for 'Add On License' and 'EasyLicense'. 'Run Restrictions' includes radio buttons for 'Unlimited' (selected), 'Days', and 'Runs'. The 'Value' field is 3. 'Keys Used / Limit' is 2 of 999. The 'Options' field is empty. At the bottom, there are 'Back' and 'Generate Site Key' buttons. The 'Site Key' field at the bottom displays '27C7 E96C 3147 67B4 A417 AAAD E8'. A callout box points to this field with the text 'Site Key has been generated.'

Figure 4-13 Manually generated Site Key

- 7. Copy the Site Key from the above window into a regular email to be sent to your customer.

Table 4-2: Site Key Generator —Data Entry Fields

Field	Description
Non-Editable Fields	
Product	
Serial Number	A Serial Number is tied directly to a Product Code for a specific customer. (see Customer Information screens in the section above, <i>Add Customer Information</i>).
Prod Code	Product Code which the Serial Number is associated with.

Field	Description
Family	Product family, defined in the Product Family records in CasperWeb.
Name	Product name.
Product Version (number)	Product version number — this is the version number set for this Product Code.
Lic Type	License type is no longer used.
<i>Executable</i>	
Name	Filename specified in the Product Code creation. This is the filename that you used to obtain developer keys from CrypKey.
Executable Version	Executable version number — the source is the Rev. No. value defined in the Product Code creation process.
Memo	Optional free-form field for entry of instructions or other information concerning the generated Site Key.
Password	Password defined for the Executable in question (see Figure 3-24 Add Executable Version screen).
Editable Fields	
<i>Site Key Generation</i>	
Site Code	Site code is the string of characters created by the client side software to obtain authorization. This information is not seen by the user if they do their authorization via http. If the customer does not have access to e-mail or http they can call and give you the Site Code.

Field	Description
Auth Name	Name of the user you are generating a Site Key for. Format: X13.
Copies	<p>For fixed licenses: the number of copies of software you would like the user to be able to run on different machines at one time. If you issue 3 copies, the customer has the ability if enabled in your software to transfer the software to two other machines and still have a copy available on their own machine. Format: I9</p> <p>For floating licenses: the number of users who can concurrently use the software over a network. Format: I9.</p>
Fixed button	Option button: fixed type of license (i.e., the software must be run on one or more specific computers, depending on the value specified for Copies (see above).
Floating button	Option button: floating type of license (i.e., the software is loaded on a Server and can be accessed concurrently by one or more users, depending on the value specified for Copies (see above).
Level	Level assigned to the license (default value: zero (0)). A level is a number that controls a variety of features in your product. A corresponding number must exist in the actual software.
Add-on License checkbox	Checkbox used to indicate the license will add to an existing authorized license.
Keys Used/Limit 0 of 1	<p>This dual field contains:</p> <ul style="list-style-type: none"> - The number of authorizations already generated for this Serial Number;

Field	Description
	<ul style="list-style-type: none">- The maximum allowable number of authorizations that can be generated for this Serial Number (as defined in the Customer Information screen, see <i>Edit Customer Information</i> on page 140).
Run Restrictions	<p>Any of the following restrictions on the customer's use of the program:</p> <ul style="list-style-type: none">- unlimited (no restrictions applied)- days (the number of days the customer can run the program)- runs (the number of program runs available to the customer) <p>If Days or Runs is selected, you must input the number of days or runs into the Value field on the right of the panel.</p>
Value	Number applying to the selected Run Restrictions.
Options	Checkboxes representing options that you can select or deselect.

Chapter 5: Managing CasperWeb

CasperWeb offers an easy interface for user and system maintenance tasks.

CasperWeb is the Graphical User Interface (GUI) you use to manage your customer and product information in the Casper database, and to maintain the system. See *Chapter 1: Overview* for more information.

System maintenance and user functions are available in CasperWeb from the CasperWeb Main menu, SuperUser submenu. See Figure 5-1 SuperUser menu:

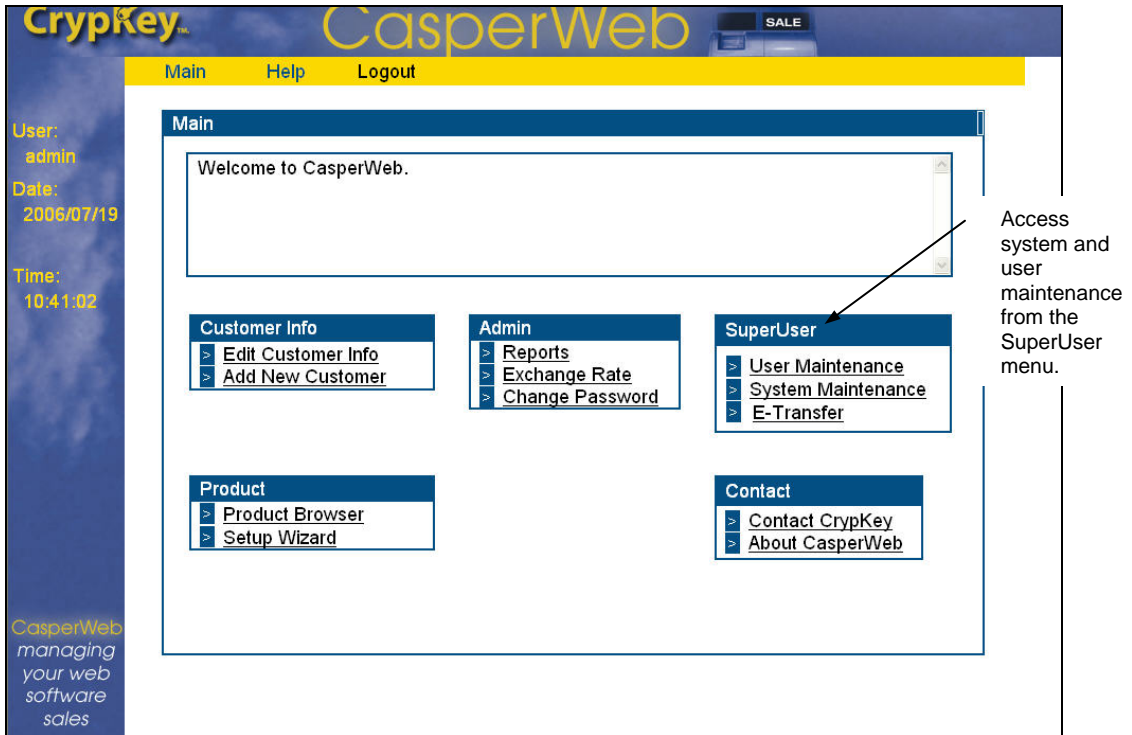

Figure 5-1 SuperUser menu

Note: The SuperUser menu is available only to those with SuperUser access, i.e. administrators.

Note: CrypKey eTransfer maintenance is also available from the SuperUser menu. This feature is discussed in *Part 5: Casper eTransfer*.

User Maintenance

The person(s) in charge of administering your CasperWeb installation can add, modify, and delete users with varying levels of access privileges, as well as change passwords. CasperWeb administrators must have “Super User” access privileges.

ADD A USER

Procedure

1. Go to the CasperWeb Main menu (see *Log on to CasperWeb* starting on page 68).
2. From the SuperUser menu, click the User Maintenance link. The User Maintenance screen displays:

The screenshot shows the 'User Maintenance' interface. At the top, there's a header bar with 'User Maintenance' on the left, 'Company Number: 0' in the center, and a 'Choose' button on the right. Below the header, the user 'admin' is selected in a dropdown menu. To the right of this are 'Add' and 'Delete' buttons. An arrow points from the text 'Click Add.' to the 'Add' button. Below the user selection, there's an 'Access Level' dropdown set to 'Super User All Accesses' and a 'Change Password' button. The 'Last Access' field shows '2005-11-16 18:21'. The 'Real Name' field contains 'Administrator'. The 'Description' field has a text area with 'Casper Web administration user' and a small list icon on the right. The 'Message' field contains 'Welcome to CasperWeb.' and also has a list icon. At the bottom, there are 'Submit' and 'Back' buttons.

User Maintenance		Company Number: 0	Choose
User	admin	Add	Delete
Access Level	Super User All Accesses	Change Password	
Last Access	2005-11-16 18:21		
Real Name	Administrator		
Description	Casper Web administration user		
Message	Welcome to CasperWeb.		
Submit		Back

User

Password

Real Name

Description

Message

Access Level **Vendor**

Done **Back**

Select from pre-determined access level.

Enter the other information.

Figure 5-3 Add New User screen

4. Click on the drop-down arrow for the **Access Level** field to select an access level, which is pre-defined in the Casper installation.
5. Enter the information as per the following table:

Table 5-1: Add New User — Data Entry Fields

Field	Description
User	User ID
Access Level	Drop-down list containing available access levels (pre-defined)
Password	Password that the user will enter to proceed with the application
Real Name	User's full name
Description	Relevant information about the user's role in using the application
Message	Message that the user will see when logging onto the system.

6. Click **Done**. A message will appear on the bottom of the screen to report that you have successfully created a new User.

Add New User **Company Number: 0** **Choose**

7. Click **Back** to return to the User Maintenance screen.

DELETE A USER

Procedure

1. From the User Maintenance screen (see Figure 5-2 User Maintenance screen), click on the **User** down arrow to select the User record you wish to delete.
2. Click **Delete**. The **Delete** button will change to **Confirm Delete**.

User Maintenance (Certifiable) #: 224 [Choose](#)

Description:

Message:

[Submit](#) [Back](#)

Click to confirm deletion.

Figure 5-5 Delete User confirmation

3. If you wish to continue, click **Confirm Delete**. CasperWeb displays the deleted record:

The screenshot shows the 'User Maintenance' interface. At the top, there is a header bar with the title 'User Maintenance', a label '(Certifiable) #: 224', and a 'Choose' button. Below the header, the interface is divided into several sections. On the left, there are labels for 'User', 'Access Level', 'Last Access', 'Real Name', 'Description', and 'Message'. To the right of these labels are corresponding input fields: a drop-down menu for 'User', a drop-down menu for 'Access Level', text boxes for 'Last Access' and 'Real Name', and text areas for 'Description' and 'Message'. To the right of the 'User' and 'Access Level' fields are buttons labeled 'Add', 'Delete', and 'Change Password'. At the bottom of the form, there are 'Submit' and 'Back' buttons. A message 'User was deleted.' is displayed at the bottom left. An arrow points from the 'Delete' button to the 'User' field with the text 'Select user.' Another arrow points from the 'User was deleted.' message to the 'Back' button with the text 'User successfully deleted message.'

User Maintenance (Certifiable) #: 224 Choose

CHANGE A USER PASSWORD FROM SUPERUSER MENU

Procedure

1. To change a User's password from the User Maintenance screen, select the User from the drop-down list.
2. Click **Change Password**. The Change Password screen displays:

Change Password

User

New Password

Retype Password

OK

Back

Enter password, and re-enter to confirm.

Click OK.

Figure 5-7 Change Password – from User Maintenance screen

3. Enter the user's new password.
4. Retype the password.
5. Click **OK**. You will get a confirmation message that the password was successfully changed.

System Maintenance

Use the System Maintenance menu to view and configure the Casper Server. The System Maintenance menu consists of 9 pages:

1. General
2. Email
3. E-Receipt
4. Licensing via Email
5. Easy License
6. Auto Import
7. Credit Card
8. Fraud

9. Taxes

Note: Pages 1-2 and 4-6 are described in this section; for page 3, and 7-9, please refer to *Part 3: Casper eCommerce*.

GENERAL

Page 1 allows you to configure email settings, database and CasperWeb log in information.

Procedure

1. Go to the CasperWeb Main menu (see *Log on to CasperWeb* starting on page 68).
2. From the SuperUser menu, click the System Maintenance link. The System Maintenance screen displays:

The screenshot shows the 'System Maintenance' interface with a '1 - General' dropdown menu. The page is divided into three main sections: General, Database, and CasperWeb Login Information. Callouts provide instructions for various fields and buttons:

- Enter subject to trigger email processing.** Points to the 'Trigger on subject' field, which contains 'Registration Request'.
- Select another menu option, or click Next Page to go page 2.** Points to the '1 - General' dropdown menu.
- Click to test email checking.** Points to the 'Email Test' button.
- Set timeframe for Casper to check customer emails.** Points to the 'Check Email every' field, which is set to 0 hours and 1 minute.
- Run database updates.** Points to the 'Run Database Updates' button.
- Enter CasperWeb login information.** Points to the 'CasperWeb Login Information' section, which includes 'Login User' (admin) and 'Login Password' fields.

The 'General' section includes an 'Update' button and 'Page 1 of 9' navigation links ('Prev Page', 'Next Page'). The 'Database' section includes fields for 'ODBC Name' (CasperDB), 'Login User' (DBA), 'Login Password', and 'Company Number' (with a note: '(Enter the company number you received from CrypKey)').

Figure 5-8 System Maintenance – General

- Page #1, General, is shown in the drop-down list. To select another option from the System Maintenance menu, click on the drop-down arrow, or click **Next Page**. Click **Prev Page** to return to the previous page.
- The **General** page is divided into three sections: General, Database, and CasperWeb Login Information.
- General** area: Enter information as per the following table.

sTable 5-2: System Maintenance/General Page/General – Data Entry fields

Field	Description
Check Email every	How often (in hours and minutes) you want Casper to check for email from your customers. The Casper Client sends email registration requests to the server whenever an HTTP request is unable to be processed. On page 2 of the System Maintenance screen you will set up the email account to be used for this purpose.
Trigger on subject	Acts as a filter for messages. Only emails with the specified subject in the subject line (e.g. "Registration Request") will be processed by Casper.

IMPORTANT

The Trigger on Subject line must be identical to the subject line entered through your CrypKey-protected software, e.g. CrypKey Instant. See *Chapter 6: Test Casper eRegister*, Figure 6-1 CrypKey Instant with Casper enabled.

- Click **Email Test** to run a test of your email configuration. See *Part 1: Setting up Casper, Set up a Test Email Account* for details on how to run a test email.
- Database area:** Enter information as per the following table:

Table 5-3: System Maintenance/General Page/Database area – Data Entry fields

Field	Description
ODBC Name	ODBC database name of the Casper database: casperdb.
Login User	your ODBC database userid
Login Password	your ODBC database password.
Company Number	Contact CrypKey Technical Support at Support@Crypkey.com to obtain this number.

- Click **Run Database Updates** to update the information in the Casper database. This includes table updates, etc. which Casper needs to run, but does not include any customized information. The Casper Server checks CasperWeb for Serial Numbers

and other customer information when responding to customer authorization-request messages.

Note: Run **Database Updates** after any changes to the database, e.g. an installation or importing data.

9. **CasperWeb Login Information** area: Enter information as per the following table:

Table 5-4: System Maintenance/General Page/CasperWeb Login Information – Data Entry fields

Field	Description
Login User	Your CasperWeb log in userid
Login Password	Your CasperWeb log in password

10. Click **Update** to save the changes for the entire screen.

EMAIL SERVER SET-UP

Page 2 – Email allows you to set up the incoming and outgoing email servers for Casper email.

Procedure

1. From the System Maintenance menu, select page **3 – Email** from the drop-down menu. The Email Server page displays:

The screenshot shows the 'System Maintenance' interface with a dropdown menu set to '2 - Email'. The page is titled 'Email Server' and includes an 'Email Test' button. It is divided into two main sections: 'Incoming Email (POP3)' and 'Outgoing Email (SMTP)'. Each section contains input fields for 'Server', 'Logon User', and 'Logon Password'. The 'Outgoing Email (SMTP)' section also includes a 'Return Address' field. The page is labeled 'Page 2 of 9' and has 'Prev Page' and 'Next Page' buttons.

System Maintenance		2 - Email
Update	Page 2 of 9 Prev Page Next Page	
Email Server Email Test		
Incoming Email (POP3)		
Server	<input type="text" value="mail.telus.net"/>	
Logon User	<input type="text" value="mytest"/>	
Logon Password	<input type="password"/>	
Outgoing Email (SMTP)		
Server	<input type="text" value="mail.telus.net"/>	
Logon User	<input type="text" value="mytest"/>	
Logon Password	<input type="password"/>	
Return Address	<input type="text" value="Jane_Green@telusplanet.net"/>	

Figure 5-9 System Maintenance – Email Server

2. Enter the required information according to the following table:

Table 5-5: System Maintenance/Email Server – Data Entry fields

Field	Description
Incoming Email (POP3): server/logon user/logon password	<p>POP3 is the only incoming email type Casper supports.</p> <p>The name of the Server that handles incoming and outgoing email; the Logon User (either your user name or email address, depending on how the email server is set up); the Logon Password.</p>
Outgoing Email (SMTP) server/logon user/logon password/return address	<p>SMTP is the only outgoing email type Casper supports.</p> <p>The name of the Server that handles outgoing email; the Logon User (either your user name or email address, depending on how the email server is set up); the Logon Password; and the Return Address to which customers may reply.</p> <p>This should be an email address that is checked by a human, such as a support group's email address, and is usually different from the Casper server email address. Click Update to save the changes.</p> <p>Note: The return email address must be filled in. Some email servers require it.</p>

Note: The incoming email server logon user and the outgoing email server logon user may be different.

3. Click **Update** to save changes.

E-RECEIPT

Page 3 – E-Receipt allows you to configure the Casper server to send automatic electronic receipts in response to successful credit card transactions made via Internet messages. Refer to *Part 3: Casper e-Commerce* for details.

For transactions made via email messages, separate electronic receipts are not issued. Instead, the receipt information is included in the standard confirmation email sent to the customer.

LICENSING VIA EMAIL

Page 4 – Licensing via Email allows you to send your customer authorization via email. You can force use of email authorization by *not* providing the URL for Internet-based authorizations in the Casper Wizard. As well, if the http: authorization fails, Casper will revert to email authorization automatically.

Procedure

1. From the System Maintenance menu, select page **4 – Licensing via Email** from the drop-down menu. The Licensing via Email page displays:

System Maintenance

4 - Licensing Via Email

Company Number: 0

Licensing Via Email

Archive file

☐ Include sender's body text in mail-back response text

☐ Send license / eReceipt as reply to original email

☐ Send license / eReceipt to email address supplied in Wizard

Product Code

Default

☐ Use Default Response Text

Response Text

Figure 5-10 System Maintenance – Licensing via Email

2. Enter the information according to the following table:

Table 5-6: System Maintenance/Licensing via Email – Data Entry fields

Field	Description
Archive file	Specify the full path for the log file to be written to.
Email options	Click the checkbox options that you require. Typically you should select the checkbox Send license/eReceipt to email address supplied in Wizard . If you select this checkbox, Casper will send the reply email to both the Server and the customer's email address as entered in the Casper Wizard. If this option is not selected, the reply is sent to the originating email address.
Response Text/ Use default response text	Enter the response message to be sent to your customers when licensing your software via email. In your message, be sure to instruct your customer to enter the site key that Casper generates and sends with the reply email, in order to have their authorization completed. Check the box Use Default response text to use the default response text.

3. Click **Update** to save your changes.

EASY LICENSE

Page 5 – **EasyLicense** allows you to instruct Casper to use a Normal license instead of EasyLicense in the event that EasyLicense fails (see Figure 3-37 Product Code Add screen). A Normal license is one defined by you with particular license restrictions. The Serial Number you use for authorization in Casper Wizard contains the license restrictions.

Procedure

1. From the System Maintenance menu, select page **5 – EasyLicense** from the drop-down menu. The EasyLicense page displays:

The screenshot shows a web interface for 'System Maintenance' with a dropdown menu set to '5 - Easy License'. The page has a blue header bar with the title 'System Maintenance' and the selected page '5 - Easy License'. Below the header, there is a yellow 'Update' button on the left and 'Page 5 of 9' with 'Prev Page' and 'Next Page' buttons on the right. The main content area is titled 'EasyLicense' and contains a checkbox labeled 'When using EasyLicense and an EasyLicense site code is not available, generate a Normal license instead.' Below this, there is a section titled 'Other' with three input fields: 'Casper Log File' with the value 'C:\Program Files\CrypKey\CASPER_222b\casper.log', 'Wrap log file length' with the value '1000000' and '(bytes)' next to it, and 'CallBack DLL' with an empty field.

System Maintenance		5 - Easy License
Update	Page 5 of 9	Prev Page Next Page
EasyLicense		
<input type="checkbox"/> When using EasyLicense and an EasyLicense site code is not available, generate a Normal license instead.		
Other		
Casper Log File	C:\Program Files\CrypKey\CASPER_222b\casper.log	
Wrap log file length	1000000	(bytes)
CallBack DLL		

Figure 5-11 System Maintenance – EasyLicense

2. Enter the information according to the following table:

Table 5-7: System Maintenance/Easy License – Data Entry fields

Field	Description
When using EasyLicense and an EasyLicense site code is not available, generate a Normal license instead.	Check to enable this feature. Casper must be able to read a site code HDSN in order to enable EasyLicense.
Others	
Casper log file	This is the default directory and name of the Casper log file. You can change the directory where the log file will be stored. You can leave the log file blank, thus disabling event logging; however, this is not recommended. The log file is also useful to CrypKey Technical Support, should you need to seek assistance in resolving system problems.
Wrap log file length	Specify the size of the file before it rolls over. The file is a text file and does not contain proprietary or private information. Each event includes a timestamp. The Server truncates old data in order to maintain the log file at a maximum of 128 KB and prevent extremely large log files.
Callback DLL	The name of the DLL (Dynamically Linked Library). The DLL must be available in the Casper install directory. Input is optional. See <i>Appendix A</i> for more information on callback routines.

3. Click **Update** to save your changes.

AUTO IMPORT

Page 6 – Auto Import allows you to import customer information in .csv or .xml files for entry into the Casper database (this is the quick alternative to manually adding the information via the Customer Add screen, see *Add Customer Information* on page 133).

Procedure

1. From the System Maintenance menu, select page **6 – Auto Import** from the drop-down menu. The Auto Import page displays:

System Maintenance 6 - Auto Import

Update Page 6 of 9 [Prev Page](#) [Next Page](#)

Auto Import

Import every hours minutes (set both to zero to disable)

Source Directory

Archive Directory

Product import

☐ Generate Product Code error files

☐ Ignore duplicate data errors

☐ Overwrite data if duplicate

Figure 5-12 System Maintenance – Auto Import

2. Enter the required information according to the following table:

Table 5-8: System Maintenance/Auto Import – Data Entry fields

Field	Description
Import every	Instructs the Casper Server to check periodically for import files. Set the import-file checking interval by hours and minutes. Set both hours and minutes to zero to disable.
Source directory	The full path to a directory where the import files will be extracted by the Server.
Archive directory (see Note below)	The full path to a directory where import files will be moved after being processed by Casper Server. Note: A log file (*.log) is also created in the Archive Directory for each file processed. If there is an error, an error file (*.err) is created in the Archive Directory. You should check the Archive Directory for error files, correct the corresponding import file, and copy the import file back to the Source

Field	Description
	<p>Directory for reprocessing.</p> <p>Error files and log files will be kept in the Archive Directory as well.</p>
Product Import	<p>General Product Code error files – this setting causes Casper Server to generate an additional error file in the archive directory, if there is an error in the Product Code.</p> <p>Ignore duplicate data errors – this setting allows the import of duplicate data without generating an error.</p> <p>Overwrite data if duplicate – this setting allows imported data to overwrite existing database data, even in cases of duplication.</p>

Note: For details of constructing Casper data externally in a Comma-Separated Values (CSV) Auto Import file, see *Appendix A: Technical References*, CSV import file formats.

3. Click **Update** to save your changes.

Chapter 6: Test Casper eRegister

Before processing live customer orders, we recommend you test Casper using your company data.

In *Part 1: Setting up Casper*, you tested Internet-based authorization requests from customers and issuing of licenses for your software; and also email authorization requests and issuing of licenses, using CrypKey-supplied test data. Now you need to repeat those tests using the live company data you entered (see *Chapter 3: Managing Products* and *Chapter 4: Managing Customers*).

Before testing Casper communications with your company data, you must first authorize the software.

Authorize your Casper Software

Refer to the following step-by-step instructions for licensing Casper.

To request your company-specific Casper files, send a request to authorize@Crypkey.com asking for your company-specific Casper files. These files can only be obtained after CrypKey has received payment.

CrypKey will email you the following files:

- **priv.key** – encryption key that replaces the sample key installed with Casper
- **pub.key** – public encryption key to distribute to customers
- **sk32mmtd.dll** – site key generator dll customized for your company products.

Procedure

1. Stop the web services using the statements:

```
net stop iisadmin /y
```

```
net stop caspertimerservice
```

```
net stop casperv6
```

2. Place the **sk32mmtd.dll** file in the Casper program directory.
3. Copy the **priv.key** file to your Casper program directory.
4. Put the **pub.key** file into the distribution that your client receives.
5. Restart the web services using the statement:

```
net start w3svc
```

```
net start caspertimerservice
```

Test Casper Software using Company Data

Testing Casper eCommerce software follows the same process as in *Part 1: Setting Up Casper, Testing Internet-based Authorization Requests and Issuing of Licenses*. However, instead of using the test data, you will use your own company data.

Do *not* use the Client Test Program or the Simple Test Program, because you are now using your company-specific files **sk32mmtd.dll**, **priv.key**, and **pub.key**.

You must create and protect your own program to test with—for example, you can use your CrypKey-protected software (CrypKey Instant or CrypKey SDK) to run these tests. In order to use CrypKey Instant or CrypKey SDK, you must embed the Casper information into the protected software and be using the Casper Wizard. The following figure shows a sample of CrypKey Instant with Casper enabled.

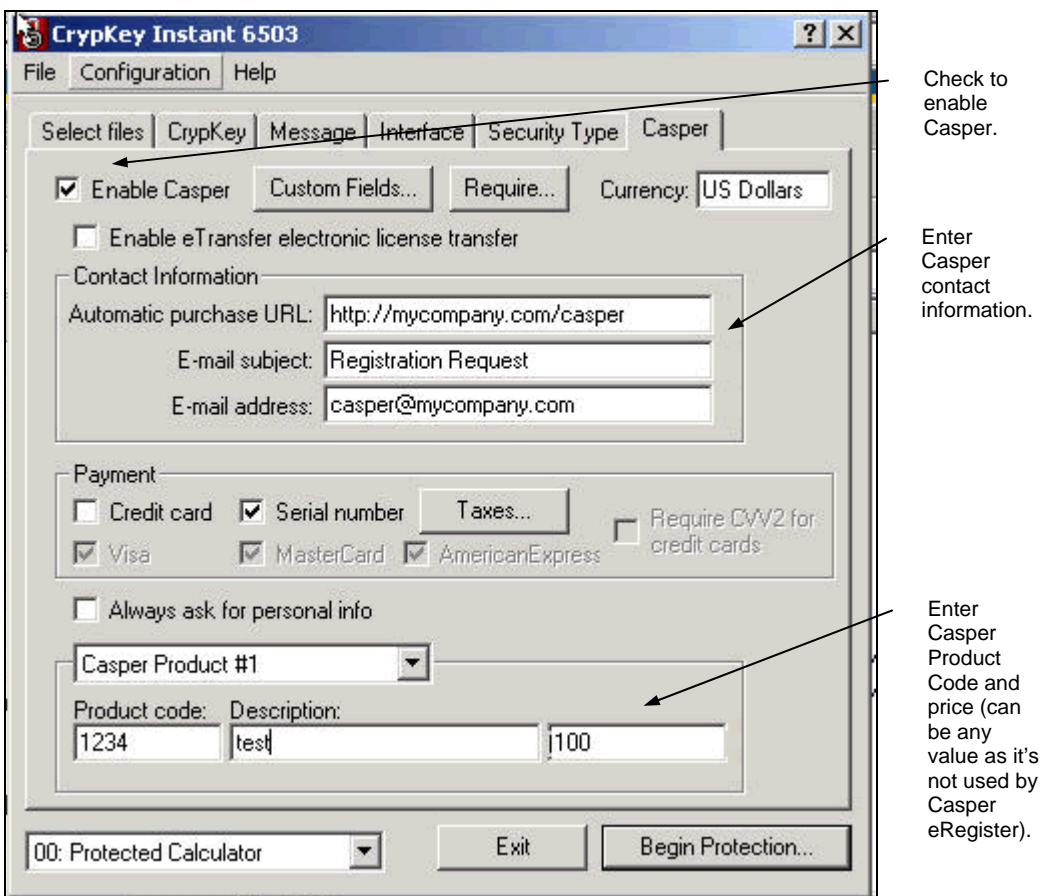

Figure 6-1 CrypKey Instant with Casper enabled

We recommend you repeat the entire test process that you performed with test data in Part 1, using your own data. This includes *Testing Email Authorization Requests and Issuing of Licenses*.

Chapter 7: Reports and Administration

Use CasperWeb to generate reports, and carry out administrative tasks.

Administrative and report functions are available in CasperWeb from the CasperWeb Main menu/Admin submenu.

Figure 7-1 Administration menu illustrates the menu you will access to carry out administrative and reporting functions in Casper.

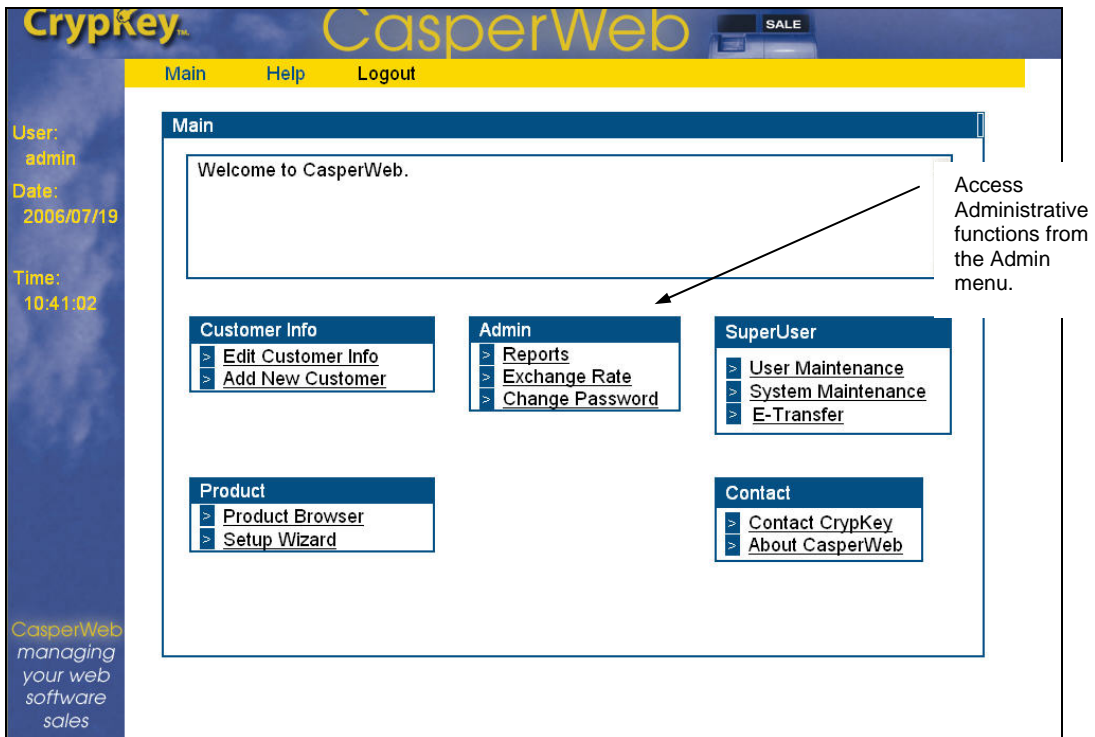

Figure 7-1 Administration menu

Admin Menu

The Administration menu offers these functions:

- Reports – this feature runs reports based on sales, authorizations, expired licenses or Serial Numbers.
- Exchange Rate – this feature applies to credit card authorizations only; see *Part 3: Casper eCommerce*.
- Change Password – this feature allows you to change the user log on passwords. (See *User Maintenance* on page 156 for information on setting up user passwords.)

GENERATE REPORTS

To generate various types of reports based on the data in the Casper database, refer to the following procedure.

Note: All reports are grouped by Product Code.

Procedure

1. Go to the CasperWeb Main menu (see *Log on to CasperWeb* starting on page 68).
2. From the Admin menu, click the Reports link. The Reports screen displays:

Reports Company Number: 0 Choose

Select A Report

- ☐ Sales Report
- ☐ Authorizations Report
- ☒ Expired Licenses Report
- ☐ Serial Numbers Report

Reporting Period

- ☒ Days
- ☐ Weeks
- ☐ Months
- ☐ Years

Start Date

End Date

Back Generate

Select report type.

Enter reporting period, start and end dates.

Click Generate.

Figure 7-2 Reports screen

3. Select a report type (Sales, Authorizations, Expired Licenses, Serial Numbers).

Note: Sales reports are normally used with the Casper eCommerce option, see Part 3 of this manual.

4. Select a reporting period (days, weeks, months, years).
5. Enter the start and end dates of the report in YYYY/MM/DD format.
For example: Start date: 2006/01/04, End Date: 2006/01/31.

Note: The start date cannot be later than the end date.

6. Click **Generate**. The applicable report is displayed: in this example, expired licenses reported by day:

Reports are grouped by Product Code.

Expired Licenses Report By Days						
BasicApp1						
	Exp Date	Pur Date	Company	Customer	Phone #	Serial #
Days						
2005/11/01 - 2005/11/30						
TESTING						
	Exp Date	Pur Date	Company	Customer	Phone #	Serial #
Days						
2005/11/01 - 2005/11/30						

Figure 7-3 Expired Licenses Report by Day

7. To print the report, right-click on the page and select the **Print** option.

Note: Some reports use a landscape orientation.

8. The following figure shows a sample of Serial Numbers reported by day:

Serial Numbers Report By Days (sorted by Serial #)				
BasicApp1				
	Serial #	Company	Customer	Auth Date
Days				
2005/11/01 - 2005/11/30				
TESTING				
	Serial #	Company	Customer	Auth Date
Days				
2005/11/01 - 2005/11/30				

Figure 7-4 Serial Numbers Report by Day

CHANGE USER PASSWORD FROM ADMIN MENU

To change the password of a user, refer to the following procedure. The password is used for logging into CasperWeb.

Note: In order to be able to change passwords, you must be an administrator.

Procedure

You can change passwords from two menus: Admin/Change Password (shown below), or as a function of the SuperUser menu/User Maintenance option.

1. From the CasperWeb Main menu, click on the Change Password link in the Admin menu. The Change Password displays:

The screenshot shows a 'Change Password' dialog box with a dark blue header. Inside, there are three labels on the left: 'User', 'New Password', and 'Retype Password'. The 'User' label is next to a drop-down menu showing 'admin'. The 'New Password' and 'Retype Password' labels are next to empty text input fields. At the bottom, there are two buttons: 'OK' and 'Back'. Three arrows point from text annotations on the right to the form elements: 'Select user.' points to the 'User' drop-down, 'Enter password, and re-enter to confirm.' points to the 'New Password' field, and 'Click OK.' points to the 'OK' button.

Change Password

User

New Password

Retype Password

OK

Back

Select user.

Enter password, and re-enter to confirm.

Click OK.

Figure 7-5 Change Password – from Admin menu

2. Select the user from the drop-down list for the **User** field.
3. Enter the user's new password.
4. Retype the password.
5. Click **OK**.
